11379. Re: [navtexdx] Reception and its Evaluation

Yahoo group: navtexdx (2015)
Date: 2015-10-31 10:24:10 UTC
From: roelof@...
Topic: 11376 Message: 11379

Hello Hans,

NAVTEX reception is only one input here to access propagation.
As 518 kHz suffers from heavy co-channel interference, results
should be taken with a grain of salt.

My main tool for propagation study is running a Linrad overnight
recording and use fast playback to evaluate the path to three
reference NDB stations: QY-263, Sydney, CAN NS, 4554 km, LT-305,
Alert, CAN NU and DDP-391, San Juan, Puerto Rico, 7042 km.

QY-263 is close to NAVTEX station $04Q, VCO, Sydney, CAN and the
same is the case for DDP-391 and NAVTEX $04R, NMR, San Juan, PTR.

Last night QY-263 could be copied from 23:00 to 06:30 UTC.
Yet reception of VCO was not great, due to intermittent fading.
DDP-391 was stronger than yesterday, but suffered from a lot of
fading around 02:50 UTC, the time slot of NMR.

However, this is probably not the last word as I don't know if
reception on the lower NDB frequencies agrees with reception on 490
/ 518 kHz.

Evaluating two different antennas is yet an other story!

73,
Roelof

11380. Navtex log from Antwerp, BEL 20151031

Yahoo group: navtexdx (2015)

Topic: 11380 Message: 11380

Hi all,

Logs over 1500 km.
T/A is back it seems, catched a boatload of messages from Ismailia as well.

73 - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]

From: david
Topic: 9398 Message: 11381

Hello All,

I spent Friday daytime mixing and laying concrete, and Friday evening building a shelter in the dark trying to keep the unexpected rain off it.

So it came as a pleasant surprise to find that propagation was much better than expected. A stream of clear transatlantic messages, as well as logs from Bodo, Egypt, and the Canarias. There must be something good in that concrete mix ;-)

Logs over 1000km

Hello Hans,

Indeed, the temporal/spatial shifting of MW/LW DX signals is a hard to understand and very elusive phenomenon.
A few miles can make the difference between crystal clear reception or nothing at all.
The general indicators (Kp, DsT, SSN, etc..) are of limited use, in the sense that they predict bad conditions with far better accuracy than good conditions. :0)

73s - Dirk

Topic: 7241 Message: 11385

Hi all,

Again I had several clear decodings from Bodo and also from Kerkyra.

May I ask you the read my follwing description? Perhaps you have got
an idea what may be wrong here with my setup.

My notebook is running under Win 7 professional.

I am having some troubles with my Perseus, not really with the Perseus
but with the software I use, i. e. the original Perseus software, Studio 1 and SDR Console V2.3.

For example, I use the original Perseus software to make a 3 hour recoding of the mediuwave band
to see if I can receive T/A AM stations.
I use Studio 1 for a nights long recoding of 518 kHZ.
Last night I wanted to follow Roelof's idea and make a recording of the longwave beacon band
with SDR Console and afterwards cerate one live file with the SDR Data File Analyser.

Each of the tree pieces of software freezes after a while very often. SDR Console last night e.g. after
22 minutes. Studio 1 after e.g. 3 hours. And the original Perseus software as well. The times
when they freeze is always different. My description above serves only as an example.
All the three of them may also run throughout the night without any problem.

In the Perseus Yahoo group quite often problems are mentioned that have to do with the Perseus driver and USB3. My 5 year old notebook only has got USB2.

What might that be? Has anybody of you heard about similar experiences? May I ask you for help?

73 and have a nice Sunday
Hans, DL4YBP

11386. OT magnetic north or true north

Yahoo group: navtexdx (2015)
Date: 2015-11-01 09:23:22 UTC
From: stephen_qrp@...
Topic: 11386 Message: 11386

Hello

Yesterday I eavesdropped on an interesting Ham conversation taking place on the 20m band.

The subject was antenna beam orientation, should orientation be relative to magnetic north or true north. Factors taken into account depended on where in the world the transmitting antenna was located and where the the signal was intended to reach (ignoring short / long path considerations).

As you would expect opinion was divided.

For general Navtex reception I tend to use a loop, which whilst not a yargi does have some directional properties. Having looked at my logs it was interesting to note that a loop in the N/S direction will still (occasionally) receive Sydney which is due West of me here on the south coast in the UK.

The magnetic declination for me is -0.44* so even if the loop were highly directional the difference between true north and magnetic north would not be a factor.

I know this is OT, but I found the discussion of interest.

Regards to all

Stephen

Hi Stephen,

IMO for most it probably doesn't make much difference. The basic considerations are what is the antenna pointing to at "N" - true north or magnetic north? What is the format of the bearing to the transmitting station - true or magnetic? That's about all you need to know. Loops can't always have perfect nulls as strong signals especially at night can come in from different angles. I have two ALA-100L loops and both can null certain NDBs and DGPS until the signals get strong.

11388. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-01 10:37:57 UTC
From: Roelof Bakker
Topic: 70 Message: 11388

Hello all,

I have been given a Wellbrook ALA100 loop head amplifier and it was used with the large aperture loop last night instead of the home made LZ1AQ amplifier.

I have yet to fully test the ALA100 at the bench, but my first impression is that when used with a large aperture loop, no difference can be observed compared with the LZ1AQ amplifier.

NAVTEX 490 kHz log over 1000 km large aperture loop:

11391. RE: [navtexdx] OT magnetic north or true north

Yahoo group: navtexdx (2015)
Date: 2015-11-01 14:04:38 UTC
From: david
Topic: 11386 Message: 11391

Hi Stephen,

As long as you measure the bearing to your target and the orientation of your antenna to the same reference, it makes no difference at all. Similarly, it doesn't matter if you measure the angle in degrees, radians, or mils.
And remember, your loop has nulls (if you built it right) but pretty poorly defined maxima. And the nulls are quite poor when dealing with skywaves.

Back in the days before Harrison built his chronometer, there was a scheme to map Magnetic Variation around the world as a means of finding your ship's Longitude. It failed, because the Earth's magnetic field is constantly changing.

Look on the bright side: even if you built a 20-element Yagi suitably sized for Navtex, it still wouldn't matter whether you pointed it using True North or Magnetic North. Even that beamwidth is bigger than the difference.

But thanks for the diversion. I'm off to plan that beam ;-))

Best Wishes,

David gm8xbz

Subject: [navtexdx] OT magnetic north or true north

Hello

Yesterday I eavesdropped on an interesting Ham conversation taking place on the 20m band.

The subject was antenna beam orientation, should orientation be relative to magnetic north or true north. Factors taken into account depended on where in the world the transmitting antenna was located and where the the signal was intended to reach (ignoring short / long path considerations).

As you would expect opinion was divided.

For general Navtex reception I tend to use a loop, which whilst not a yargi does have some directional properties. Having looked at my logs it was interesting to note that a loop in the N/S direction will still (occasionally) receive Sydney which is due West of me here on the south coast in the UK.

The magnetic declination for me is -0.44* so even if the loop were highly directional the difference between true north and magnetic north would not be a factor.

I know this is OT, but I found the discussion of in terest.

Regards to all

Stephen

Hello All,

Propagation beginning to decline a little, but still enough Eastern and Western signals to merit a "wee dram", if not champagne.

Irakleion seemed to have confused itself. The 'National' broadcast appeared on 518kHz, and the 'International' broadcast came out on 490kHz. I wonder if there were any Greek-speaking fishermen who told them

11393. Navtex log from Antwerp,BEL 20151101

Yahoo group: navtexdx (2015)
Date: 2015-11-01 18:45:17 UTC
From: Dirk Claessens
Topic: 11393 Message: 11393

Hi all,

Another night with diverse propagation patterns.
Both Roelof and David logged Sydney at 02:43..02:45hr, but at that time
I was blessed with a booming signal from the eronneous Irakleion
transmission in Greek. See raw log below.

Then,at 06:00, I was the only one to log Simiutaq, with the shortest
possible message.

```

11394. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-11-01 19:22:39 UTC
From: Maurizio
Topic: 5417 Message: 11394

Hello all,

yesterday night my PC stopped working, so no logs.

Last night a lot of static:

```

Hi list,

not sure if this had already been posted but the following message was received here again and again over the past days

<01:52:34> ZCZC LA43
<01:52:36> 301248 UTC OCT 15
<01:52:39> DANISH NAV WARN 270/15
<01:52:43> NORTH SEA.FANOE BIGHT
<01:52:46> A SMALL AEROPLANE HAS CRASHED IN POS
<01:52:52> 55-17.6N 008-00.9E. DEPTH ABOVE THE
<01:52:58> AEROPLANE IS UNKNOWN. THE AEROPLANE IS
<01:53:04> UNMARKED. A RESTRICTED AREA HAS BEEN
<01:53:10> ESTABLISHED WITHIN A RADIUS OF 2,5 NM
<01:53:16> FROM THE POSITION. SAILING FISHING AND
<01:53:22> ANCHORAGE IS PROHIBITED INSIDE THE AREA.
<01:53:28> NNNN

It seems it was a Danish F-16 that went down into the North Sea off the coast of the western island of Rømø at around 2.30pm on Tuesday.

http://www.thelocal.dk/20151027/danish-f-16-crashes-into-north-sea

Luckily the pilot was able to use his ejector seat and was not seriously injured in the incident.

Hello Hans,

Hard to diagnose from a distance...

I understand that you run 3 recordings in parallel: Perseus, Studio 1
and SDR Console?
If so, can your system handle the heavy disk load this will almost
certainly cause?

To investigate, I think you need to first do an overnight recording with
only the Perseus client.
If this runs reliably for a night we can assume that Perseus by itself
is stable and not the root cause of the problem.

Then, add Studio 1 and see what happens, then SDR Console.

Regards - Dirk

From: david
Topic: 9398 Message: 11400

Hello All,

'Diverse propagation' has reached the North Western part of Europe.
Quite a mixed bag. This is the start of the month, when I cover the whole 24hours to keep REU up to date with stations that we normally skip over. I hope it shows some sort of pattern and gives a record of conditions. It is just a shame that the conditions of the past few days didn't persist a little longer.
Sadly, there are not many good catches hidden in the clutter. Bodo and Vardo were very prolific. Malin Head seem to be slipping back into their early-start routine.

I have only logged the broadcasts transmitted in the stations' allocated slots. Ad hoc gale warnings and weather reports have been omitted. Only one message per station per time-slot is recorded.

Logs for 24 hours

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Nov 02, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

11401. Re: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-02 14:28:51 UTC
From: Roelof Bakker
Topic: 9398 Message: 11401

Hello David,

My NDB propagation indicators showed mediocre T/A propagation at best.

Conditoions are like the weather; we have to live with it.
As you live in Scotland, you certainly have to, I guess.

If not, living in a cave at least 300 feet below the surface might be an alternative!

Kidding aside, the fortecast is; <severe geomagnetic storm>

73,
Roelof

11402. Navtex log from Antwerp, BEL 20151102

Yahoo group: navtexdx (2015)
Date: 2015-11-02 15:48:41 UTC
From: Dirk Claessens
Topic: 11402 Message: 11402

Hi all,

Dull conditions again, log over 1500 km.

Regards - Dirk

11405. Canadian Navtex: The Big Shake up...

Yahoo group: navtexdx (2015)
Date: 2015-11-02 20:04:46 UTC
From: Dirk Claessens
Topic: 11405 Message: 11405

Hello Roelof & all,

You may have noticed Alan's recent post about the changes to Canadian station names.
Below is a list of these changes. Only Iqaluit is unchanged, and iconic names like Labrador and St. John's are history. :'(<weep>

As far as I can see on Google Earth, these are not big changes in geografical location, but more an attempt to more accurately locate each station.
I can have an update ready for Yand's station table on short notice, but am unsure what these changes involve for Roelof's REU, hence my question to him: how are we going to synchronize this to avoid confusion?

Regards - Dirk

From: Roelof Bakker
Topic: 11405 Message: 11406

Hello Dirk,

When changes are made in the NAVTEX system, it has been Martin's policy to keep the old stations in the data base, so that someone providing a report from say 2012, it can still be entered in REU.

I have to think it over how to handle this.

73,
Roelof

11407. RE: [navtexdx] Canadian Navtex: The Big Shake up...

Hi Dirk, Roelof, and everyone,

This also brings us back to the question of multiple names, again ;-((

It would be so nice if we could all use just the one name for each station, but I fully understand Roelof's point about old logs.
Here is a train of thought. {I think it is} the DSC list that uses a script that 'translates' rogue names to a 'standard' during the upload, and in historical records, and the server has one standardised name. Martin is a clever chap. Can he do something similar for Navtex? As for choosing our standard name, why not use the IMO names? They are in the Master Plan in the files section, as a starting point.
If the NDBList can come up with Country Names, surely we can do the same with some transmitters. As a starter, I'm happy to go along with Dirk's list pending software approval.

Best Wishes
David

Hi Roelof,

This makes sense, and the same applies for Yand: updating Yand's station table will not change station names as they were previously logged. The only unambiguous Navtex ID is navarea + ID letter.

Regards - Dirk

11410. San Juan in Spanish???

Yahoo group: navtexdx (2015)
Date: 2015-11-03 09:22:54 UTC
From: Dirk Claessens
Topic: 11410 Message: 11410

Hi all,

I almost deleted the message, thinking it was Penalva accidentally transmitting in Portuguese, then realized it was Spanish. I looked it up on the NOAA website: NOAA <http://www.nws.noaa.gov/om/marine/forecast.htm> and found:

San Juan, PR (Spanish)

CFWSPN
MENSAJES SOBRE PELIGROS COSTEROS
SERVICIO NACIONAL DE METEOROLOGIA SAN JUAN PR

Anyone got more at that time?

Regards - Dirk

11412. Lübbecke: Software freeze

Yahoo group: navtexdx (2015)
Date: 2015-11-03 10:18:58 UTC
From: dl4ybp@...
Topic: 11412 Message: 11412

Hallo Dirk, Joachim, Roelof & all,

Thank you for your ideas on the possible cause of my ‘system freeze’. I asked for help in three newsgroups and the first thing I learned was that I carefuly have to describe the problem and my technical setup (PC, operating system, HDD, receiver, software running etc. The PC I use is a Fujitsu notebook E 780, i7 CPU, Windows 7 professional, 64-bit, a bit more than 5 years old.
My speculation was that possibly after these years my Windows installation had become unstable because of the number of software I had used and had tested. After all it is a ‘hobby PC’ and trying software etc. is part of it.
The first ideas from the newsgroups centered around defect fragments of my HDD after 5 years. I realized that I had forgotten to state that I use an SSD drive which is just 9-10 months old. I followed the advice and used Scandisk/CHKDSK. The SSD is ok. I added an external HDD and checked it: ok.
The second bunch of ideas centered around the number of processes running in the background. Reduce them was the advice.
Dirk’s and Roelof’s impression was that the disk load was too high because I had stated that the freeze occurred with the original Perseus software, with studio 1 and SDR Console V 2.3. The two of them thought I was running all the pieces of software at the same time = several instances. That would be a daring thing, indeed. ;-)
Again I had the impression that I had not exactly enough described the problem. Please look at the info on my setup at the end of this messages. There it becomes clear that I use 3 radios, 3 notebooks, 3 external soundcards, no VAC and only one piece of software for running Perseus. Either the original Perseus software or Studio 1 or SDR Console V 2.3.

On last Saturday I had the Perseus running, plus SDR Console (nothing else) to record the longwave NDB band and see if I can receive NDBs stated by Roelo as reference stations for T/A propagation. The data were recorded on the SSD. SDR Console frooze after 20 minutes.
I followed Joachim’s idea to use an external HDD to see what happens. I tested on Sunday and programmed SDR Console to record 1 hour. Recording ok. I set SDR Console for 5 hours. It froze after 4:58. I had it running the night from Sun/Mon for 6 hours and the recording was ok. So, the software freezes also when a different drive for recording is used.

When I record Navtex throughout the night I have either the original Perseus software runnig or Studio 1. As decoders I mostly use YaND and TrueTTY in parallel, i.e. both are running at the same time. The same software freeze occurs at irregular times or the recording is ok.

When I use the the other notebooks with my R&S EK070 and EK071 radios plus the external soundcards and YaND and TrueTTY at the same time nothing happens. The recordings are ok.

That’s it. I hope you have not fallen asleep. Thanks again for your ideas and 73.

Hans, DL4YBP

This is the set-up

QTH : Lübbecke, Northwest Germany
Receiver : Rohde & Schwarz & EK 070, bandwidth 600Hz, AGC fast
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4
PC : Fujitsu notebook S 7010, Intel Pentium M, 1.60 GHz, HDD

(10 years old in a couple of days)
Mostly for 490 kHz and watching ham radio SSTV on 14230 kHz.

Receiver : Perseus and Studio 1 software, bandwidth 250 Hz, AGC off
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)
PC : Fujitsu notebook E 780, i7 CPU (5 years old), 512 GB SSD drive

Receiver : Rohde & Schwarz & EK 071, bandwidth 600Hz, AGC fast
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95
PC : Fujitsu notebook E 751, i3 CPU, HDD (3 years old)

11413. Re: [navtexdx] Canadian Navtex: The Big Shake up...

Yahoo group: navtexdx (2015)
Date: 2015-11-03 10:26:21 UTC
From: Roelof Bakker
Topic: 11405 Message: 11413

Hello Dirk,

Please go ahead and implement the changes.
I will follow suit in REU/RNA/RWW.

REU/RNA/RWW imports only:

YYYYMMDD hhmm KHZ ID X
20151103 0724 518 $01U ESA Talinn,EST 1560

Everything under X is skipped, so name changes in YaND do not effect
REU/RNA/RWW.

When you are at it, I have two more questions:

1. 518 $03X EAV Valencia, ESP 1497
490 $03M Cabo de la Nao, ESP 1497

This is the same transmitter, however why is the name different?

2. 518 $02R Monsanto,POR
518 $02R Penalva, POR

Why is Monsanto still in YaND's data base?

73,
Roelof

Hi all,

The more we are getting into autumn, into the times of darkness,
the more do I begin to value the mini whip.

Hans, DL4YBP

Receiver : Rohde & Schwarz & EK 071
Bandwidth: 600 Hz, AGC fast
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 True 2.95
PC : Fujitsu notebook E 751, i3 CPU, Win 10

Hello All,

I had two carriers sitting in the 490kHz passband, but YaND seemed to perform better than it did on an apparently clear 518kHz. Just goes to show that waterfall displays don't always give you the information you think they do.

I have pushed the reporting boundary out to 1500km. This removes most of the NOR and SWE stations from my list. As if in sympathy, Bodo and Vardo became much more difficult for me to decode. No T/A, either. A very unsettled ionosphere.

Logs over 1500km

Hello Roelof,

Yand's station database was originally (some years ago) extracted from Alan's Worldnavtexdatabase.pdf
Originally, 518/Valencia and 490/Cabo de la Nao were listed as such. This may have been changed a long time ago but anyway, Alan's latest version lists both stations now as "Valencia(Cabo de la Nao)"
REU says Cabo de la Nao (Valencia) for both 518/03X and 490/03M, Bill Hepburn says Cabo de la Nao for both.

I found a Wiki article her that says: " Auf dem Kap steht ?ber der Steilk?ste ein markantes Leuchtfeuer<https://de.wikipedia.org/wiki/Leuchtfeuer> auf einem wei?en Leuchtturm, der auch eine Navtex-Station beherbergt." : Wiki - Cabo de la Nao <https://de.wikipedia.org/wiki/Cabo_de_la_Nao>

If you click on the photo on the right, you can indeed clearly see T-like antenna.
As Cabo de la Nao is situated at ~100 km from Valencia, I propose to use Cabo de la Noa as the name for REU/Yand.
(The station is most likely remotely controlled from Valencia, hence the double naming??)
By the way, the view of the Cabo de la Nao cliffs is stunning on Google Earth, the lighthouse is shown in 3D!

Regarding the Monsanto/Penalva issue, it is a mystery to me how this has gone wrong. My own database only contains entries for Penalva, but the yand_stations.text file here in the group only lists Monsanto. My error no doubt!

This will be fixed in a few days, together with some other errors/inconsistencies - mostly for 490- that were found by David.

Regards - Dirk

From: Roelof Bakker
Topic: 70 Message: 11420

Hello all,

The last couple of days the loop has been directed N-S until 23:00 UTC and than the direction has been changed to E-W.

Though I do receive very good quality decodes on the loop, the total number of stations received on the mini-whip is a bit higher.

I have been thinking about a better approach for comparing both types of antennas and the way to go is to build an omnidirectional loop antenna.

This is not difficult to do; I will mount a second triangle loop the same size on the same mast at 90 degrees to the current one.
I will use an ALA100 as loop head amplifier.

This opens the possibility for a few interesting tests.
The output can be fed into a two-port splitter and this contraption will work as an omnidirectional loop. An other idea is to feed each loop to a separate receiver, each running YaND and combine the decoded messages.

Today I have been doing some preliminary work as I have installed a new splash water proof box for the antenna entry into the house.

Hello Dirk,

Excellent!

I will wait until you are ready and then change the names.
As said before only the names are changed in REU and this does not
effect log entries.

73,
Roelof

11423. Navtex log from Antwerp, BEL 20151103

Yahoo group: navtexdx (2015)
Date: 2015-11-03 19:01:19 UTC
From: Dirk Claessens
Topic: 11423 Message: 11423

Hi all,
Log over 1500Km.
I found another geographical hint in the Spanish transmission from San Juan: PASAJE DE MONA, or Mona Passage in English, often seen in messages from San Juan.

Regards - Dirk

Roelof: I will certainly be following your posts on the matter since, when one considers the physics of a loop's operation, an 'omnidirectional loop' is certainly a startling proposal.
I presume that you intend to add the signals from the pair of orthogonal loops in vectorial fashion. Otherwise I am unable to see how anything is to be gained. Of course vector addition can be accomplished with either hardware or software; the former with a Bellini-Tosi stator/rotor "mixer" or the latter with (say) one of the configurations available in DL4YHF's Spectrum Lab. Have you decided on a scheme?

Also I presume that you intend to sync the separate receivers to exactly the same frequency/phase. There are probably several ways to do accomplish such sync. Last summer I took the output from an LZ1AQ preamp on each of a pair of orthogonal loops through a pair of NE602 double balanced mixer to separate SDR-IQ receivers. A commercial USB_DDS was used as the NE602's VFO. Worked well. Had intended to take the SDR receiver outputs into direction finder configuration in Spectrum Lab. Was unable to get it working in SL and postponed further effort.

The B-T Mixer approach has proved to be a different matter ... have constructed a home-brew B-T coil system and for the past two months have been familiarizing myself with its operation. Seems to be a promising approach to recover the signal loss (6 dB max) when the bearing the beacon is not exactly aligned with the plane of one of the orthogonal pair. But there are some problems as yet unsolved. Will see what develops.

73, George M (N2XMO)

Just a heads up..good copy tonight...first reported copy on this side of the pond according to RNA.

Other TA's reported at good copy but will report tomorrow.

If anyone can verify this on the EU side I would appreciate it. Not very often a new one comes along in Navtex these days.

From: Roelof Bakker
Topic: 70 Message: 11431

Hello all,

The loop was pointing E-W last night.

Despite a geomagnetic storm and against all odds propagation turned out interesting. Northern propagation collapsed almost complete and nothing was found from regulars Arghangelsk and Bodo.
Propagation from the Caribbean was not much effected, though.

This unid was found on the loop and I did not have a clue where it might come from:

```

11432. Navtex - Onslow Nova Scotia

Yahoo group: navtexdx (2015)
Date: 2015-11-04 10:32:57 UTC
From: Vernon
Topic: 11432 Message: 11432

TA conditions were excellent last night. Was able to get a second decode
on the Azores station which was great!

Also conditions opened up to Chile, South America.

Hi Vernon,

Confirmed, CENCOMARACORES is the unique keyword here.
But note that the station was moved to the nearby island Sao Miguel,AZR
last year.

Regards - Dirk

From: david
Topic: 9398 Message: 11436

Hello All,

Still the unwanted carriers on 490kHz, but it was another Champagne night despite them when $03G Poti popped up for the first time. Normally, Monsanto is so strong I can't decode Poti, but they were quicker to start this morning and I got a full message.
In fact, it was generally a good night for the Eastern Mediterranean area, which is usually difficult. North and West directions remained poor, with no Canadians at all, regardless of their names. Bodo made a brief appearance, but it only just exceeds the distance hurdle so I would expect to hear the station more than I actually did.

Logs over 1500km

11437. Report from Nova Scotia, Canada

Yahoo group: navtexdx (2015)
Date: 2015-11-04 11:39:11 UTC
From: Michael Yule
Topic: 11437 Message: 11437

Report from : Michael Yule

QTH : Western Shore, NS, Canada
Receiver : Sony ICF2001 into WD6CNF DSP Filter
Antenna : Wellbrook 1530S
Decoder : YaND V 6.1

Hi all - I've been lurking on the group for a while. I recently moved to Nova Scotia from just north of Vancouver BC and have a temporary setup here in our rental home while my wife and I search for more permanent quarters. It was a pretty good night last night, with my first TA Navtex DX.

Kind regards,

Michael

11438. Another YaND question

Yahoo group: navtexdx (2015)
Date: 2015-11-04 11:42:01 UTC
From: david
Topic: 11438 Message: 11438

Hello All,

If I (follow the update instructions in the Files area) and load a new version of YAND_STATIONS.txt , does the new version remove all traces of the list that was in YaND, or does it just modify the records leaving old station data attached to the programme?

I am prompted to ask, because I know a new version is imminent. I have installed my own version in the past, (to put in details for Piombino when it was new) and, although I only included details once, my YaND detects $03N as "Ixx Piombino ITA/Ixx Piombino ITA". I know it is my doing, because I added the station to my StationList as "Ixx" at a time when we were unsure of the callsign. I installed my Stationlist another time to change a couple of my timing errors. Although my Piombino entry only appears once in the text-file, my YaND installation seems to have two entries to choose from. Will the new file give me a third?

Best Wishes
David, GM8XBZ

Hi David,

This is what Yand does:

IF: a record with exactly the same frequency,navarea,ID-letter and call sign is present in the database table, the data in the record will be replaced with the data in the text file.
ELSE: a new record will be built with the data in the text file, and added to the database table

Regards - Dirk

Topic: 11441 Message: 11441

Hi all,
Update available here: update directory
<https://groups.yahoo.com/neo/groups/navtexdx/files/Navtex%20Software/YAND%20Navtex%20%20Decoder/>
You need YAND_STATIONS.TXT
Read the README.TXT if unsure about the procedure.

Regards - Dirk

11445. Re: [navtexdx] Re: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-04 17:07:39 UTC
From: Roelof Bakker
Topic: 70 Message: 11445

Hello George,

What I am doing is not that far fetched.
I am using two triangle loops with a circumference of 10M.
They resonate at 28 MHz and besides good reception at 500 kHz, they
also give excellent results over the whole MF and HF range.

To create a level play field for comparing a loop antenna with my
mini-whip, I have now two active loops at right angle and mounted on
the same mast. The outputs are combined with a two-port combiner.

I gather that the nulls of one loop is filled up by the other.

This system is now feeding an Afedri which uses two Studio 1
software receivers; one for 490 kHz, the other for 518 kHz.

My PERSEUS Linrad combination is receiving 518 kHz on my mini-whip.

I will use this set up for a couple of weeks on NAVTEX.

73,
Roelof Bakker

11447. Re: [navtexdx] [YaND] Station table update

Yahoo group: navtexdx (2015)
Date: 2015-11-04 18:56:54 UTC
From: Dirk Claessens
Topic: 11441 Message: 11447

Hi again Vern,

Please use whatever decoder is your favourite, this group is about Navtex, Yand is just a coincidental by-product. :0)
I have stopped using Frisnit several years ago after some bad crashes. I found out that when Frisnit - for whatever reason - cannot "see" the remote server, it ends up in a fast HD write loop which fills up the HD pretty quickly, leaving you with humonguous files in some obscure hidden directory.

Regards - Dirk

Roelof:

Thank you for your reply. I now understand your use of the two-port 0° splitter to vectorially combine the power from the pair of orthogonal loops. I am learning, albeit slowly.

73, George M (N2XM)

Subject: Re: [navtexdx] Re: NAVTEX from Zealand, HOL

Hello George,

What I am doing is not that far fetched.
I am using two triangle loops with a circumference of 10M.
They resonate at 28 MHz and besides good reception at 500 kHz, they also give excellent results over the whole MF and HF range.

To create a level play field for comparing a loop antenna with my mini-whip, I have now two active loops at right angle and mounted on the same mast. The outputs are combined with a two-port combiner.

I gather that the nulls of one loop is filled up by the other.

This system is now feeding an Afedri which uses two Studio 1 software receivers; one for 490 kHz, the other for 518 kHz.

My PERSEUS Linrad combination is receiving 518 kHz on my mini-whip.

I will use this set up for a couple of weeks on NAVTEX.

73,
Roelof Bakker

11450. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-05 09:53:33 UTC
From: Roelof Bakker
Topic: 70 Message: 11450

Hello all,

I have carefully compared reception on the active crossed triangle loops and on the mini-whip on 518 kHz.

There still seems to be some directivity involved with the crossed loops as neither Penalva,POR, nor San Miguel, AZR, were received , whilst these produced excellent decodes on the mini-whip.

There were also cases where nothing was received on the mini-whip, but good decodes on the loops.

As the receivers are not identical, this might be an issue and I will look into this.

To be continued.

NAVTEX 490 kHz log over 1000 km, two crossed large apperture loops:

Hello Dirk,

The last few days the path to the Caribbean has been excellent and
don't seem to suffer much from solar activity.

My decodes from NMR were a bit more sketchy.
Did you find anything from Miami?

73,
Roelof

11452. Navtex Logs from W Scotland

Topic: 9398 Message: 11452

Hello All,

Extreme interference on 518kHz. Especially noticeable between 2000 and 2200, it looked like a [Navtex] station in synchronising mode. Only the strongest signals could get past it. At first, I made the usual assumption that I had broken a connection, made a connection, or done something else in the shack. But nothing could remove the interference and it was coherent. I tried rebooting, swapping connections, all sorts, but only removing antenna connections got rid of it. 490kHz totally unaffected. Occasionally, the intruding signal became a single [strong] tone on the lower frequency, with 'ticks' to the centre frequency at regular intervals -- say every 10 seconds. Then back to the 'sync' format.

Did anyone else see this, or is it very local to me? Any clues about what I was seeing?
{here is my setup -- PC running an ELAD S2 with Studio 1 to give two receive channels -- two audio cables taking the signal to another PC running two instances of YaND)

Other than that, it was a mundane night's logging. I got the same awful K-index as Dirk, without the San Juan reception ;-((

Logs over 1500km

Topic: 11453 Message: 11453

Hello All,

Looking at name changes, and being a bit obsessive about spelling, I wondered if anyone could explain why it is sent as 'STATHMOS IRAKLEIO' in one transmission, but 'HERAKLEIO RADIO' in the next. [490 kHz, $03Q]

Best Wishes
David, GM8XBZ

Hi Roelof,

Only hard to identify gibberish, BNM 544-7 is the only vague clue.

73 Dirk

Hi Dave,

Heraklio/Herakleion is Greek for the former Roman name Heracleum (city
of Heracles)
Irakleio is just a modern variant.

Regards - Dirk

Hi David,

Yes, I noticed it too around that time, a very strong carrier, mostly on
the lower spectrum peak, sometimes shifting to the center frequency.
There's only one station I know off that exhibits exactly this behaviour
/between messages / is Den Helder...
Testing perhaps??

Regards - Dirk

Hallo all,

The beginning of the evening was quite interesting.
Then conditions were average here . But actually I do not
know what happened at 04:00 because Studio 1 froze at 03:43.

From: david
Topic: 9398 Message: 11460

Hi Dirk,

Well, I guess that is a relief, to hear someone else spotted it. I had been rewiring bits of the shack, and assumed I had broken something. For a long time, I didn't even consider outside influences.
I wonder who it could have been. Pinneberg is my strongest signal. At 993km, I get transmissions throughout the day. But this interfering signal was very strong indeed -- enough to garble most of a 2-hour reception period. If I spot it again, I'll make some recordings. This time, I was so fearful that it was something I had done, I spent all my energies swapping my own connections around.

Best Wishes,
David

Subject: Re: [navtexdx] Navtex Logs from W Scotland

Hi David,

Yes, I noticed it too around that time, a very strong carrier, mostly on the lower spectrum peak, sometimes shifting to the center frequency.
There's only one station I know off that exhibits exactly this behaviour between messages is Den Helder...
Testing perhaps??

Regards - Dirk

On 2015-11-05 at 11:45 , 'david' zinc65@... [navtexdx] wrote:

Hello All,

Extreme interference on 518kHz. Especially noticeable between 2000 and 2200,
it looked like a [Navtex] station in synchronising mode. Only the strongest
signals could get past it. At first, I made the usual assumption that I had
broken a connection, made a connection, or done something else in the shack.
But nothing could remove the interference and it was coherent. I tried
rebooting, swapping connections, all sorts, but only removing antenna

connections got rid of it. 490kHz totally unaffected. Occasionally, the
intruding signal became a single [strong] tone on the lower frequency, with
'ticks' to the centre frequency at regular intervals -- say every 10 seconds. Then back to the 'sync' format.

Did anyone else see this, or is it very local to me? Any clues about what I
was seeing?
{here is my setup -- PC running an ELAD S2 with Studio 1 to give two receive
channels -- two audio cables taking the signal to another PC running two
instances of YaND)

Hello Dirk,

I have changed the names accordingly.

I found three doubles in the database:

490 2G CTV Monsanto, POR

518 2R CTV Monsanto, POR

518 4X VOK Labrador, CAN

Is there a reason they are still in the database?

73,
Roelof

Hi Roelof,

The easiest solution is to delete them with dbmanager (use the 'minus" button)
David had a similar problem with Piombino, but he had added that record himself.

For Monsanto, my penny has just dropped... :-\
02R CTV Monsanto became 02R CTA Penalva, and as i explained in my recent reply to David, Yand will only update the data of a station if and only if frequency/navarea/ID/call sign are identical in both the actual database and the text file.
Otherwise, a new record will be added, which is what happened in your case. (and only old-time users will be affected)

This approach was necessary in the past: you will remember when some 5 years ago many Italian stations were relocated/closed/added, a complex operation which took over a year. (03R IAR Roma becoming 03R ICH La Maddalena, to mention the simplest case)
I guess the next version of Yand will use a simple sledgehammer approach: simply zap the whole station table and rebuild it from the text file.
Sorry for the inconvenience...
Regards - Dirk

From: david
Topic: 9398 Message: 11463
Attachments: 1 described; binary payloads are missing from this source WARC

Hello All,

The interference on 518kHz appeared again, when I was in the shack around 1700. It was a strong carrier at the lower frequency, with a 'tick' to the central frequency every 5.77 seconds (I timed multiple ticks and 'did the math'). It stopped at 1747. At 1730 I got a flawless decode from Gislovshammar. The signal strengths -- as shown on YaND's Signal tab -- were the same throughout the period 1700 - 1747.
Other than that, it was a mixed night's logging. Lots of signals around the 490kHz channel. The attached screenshot shows a lot of unwanted stuff right on the centre frequency. However, decodes seemed to go ahead quite happily. I can't see much scope for improving the decoding engine.

On 518kHz, reception was generally weaker, but I was really pleased to see $03A Novorossiysk give me three decent messages for a new station in the log.

Logs over 1500km

11464. Iran

Yahoo group: navtexdx (2015)
Date: 2015-11-06 10:48:47 UTC
From: Roelof Bakker
Topic: 11464 Message: 11464

Hello all,

For the first time ever, I have logged Iran on NAVTEX 518 kHz.
This one is very rare and has only been reported twice in REU.

The first time was by Brian keyte in March 2006, the second time was
in March 2010 by Raimo Karjalainen.

Has anyone else logged this one last night?

I have rerun my PERSEUS recording to make sure that the header was
from the same signal and it was.

Mini-Whip:

Hi Roelof,

Congratulations for that!
A sure sign of Iran is also that they start each message with "in the name of god", as I noticed in navtex logs on the internet.

Regarding the whip/loop choice, I have earlier said that a (small) loop = a whip with nulls, and you need to know what you want.
The only possible advantage a large aperture loop may have, is better performance on HF.

Regards - Dirk

Hi all,

No T/A, but Baku popped up in the log, 3600+ km over a land path.

Regards - Dirk

David: I also noticed the rogue carrier starting at 21:20 utc, will post screenshots later.

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]

Regarding the loop versus mini-whip question, there is more to it.
Last night I received NMR on the mini-whip at 23:06 UTC.
Nothing at all was found on the crossed loops.

I also found that receiving at daytime a distant NDB (454 km over a sea path), the signal to noise ratio on the mini-whip is substantial better than on the loops. My guess is that low angle reception on the mini-whip is better than on the loops.

I will look into this, which means that I have to run two identical receivers under Linrad, making overnight recordings.
Using fast playback over the whole night on selected NDB's reception on both antenna types can be evaluated.

I have played with the idea to look into computer antenna simulations, however I gather that the real thing will bemore

interesting!

73,
Roelof

Hi Roelof,

A really nice catch, indeed. I looked in my logs, and found only silence at that time.
Regarding your second example, I guess the times are from when you replayed it, not the reception time.
Useful information about 'THE NAME OF GOD' from Dirk. Every little hint helps when we are tracking down marginal decodes.

To what extent do you think the actual installation of the mini-whip influences performance? If the loops and miniwhip are co-sited, is there still such a large difference? Does your local water-table make a significant contribution?

Best Wishes
David, gm8xbz

Subject: [navtexdx] Iran

Hello all,

For the first time ever, I have logged Iran on NAVTEX 518 kHz.
This one is very rare and has only been reported twice in REU.

The first time was by Brian keyte in March 2006, the second time was in March 2010 by Raimo Karjalainen.

Has anyone else logged this one last night?

I have rerun my PERSEUS recording to make sure that the header was from the same signal and it was.

Hello David,

Since I have installed a mini-whip, I have had the most incredible DX reception at LF. When you look up my name on REU for NDB reception, you will be amazed.

I am still amazed at what I can hear and now I am able to dig a little deeper into the noise with the help of Linrad, we will see what can be added to the all-time log.

It is hard to believe that such a simple antenna can do this, but it is really the case. Being omnidirectional is a big plus as in principle you won't miss anything when chasing NDB's.

NAVTEX is different, but again all the juicy DX is received on my mini-whip so far.

The way to go is to work for a low noise floor!
Which accounts for any antenna!

73,
Roelof

11475. The rogue carrier on 518

Yahoo group: navtexdx (2015)
Date: 2015-11-06 15:23:21 UTC
From: Dirk Claessens
Topic: 11475 Message: 11475

Hi all,

You may have noticed David's observations and mine about the carrier in the 'I' time slot at 17:20 and 21:20.
Yesterday evening I could observe it live and took some screenhots, attached below.

As can be observed on the screenshots, the carrier started at 21:20, exactly on 517.15KHz, and then decays to low values till 21:26.
Then, at 21:26 a peak can be seen caused by Torshavn. The carrier then gains strength again.
Around 21:28..21:30, some interruptions can be seen on the Perseus screenshot.
During the 21:20..21:30 period, nothing at all was received, except Torshavn.

This signal strength variation is surely propagation related, so as I earlier suspected the origin can not be Den Helder, which is simply too close to my QTH.

Izmir was not received here the last 2 days,but this is not exceptional.
However,Yand's average signal quality indicator values for Izmir from the last weeks lie in the 15..35% range.

Wait and see...

Regards - Dirk

11478. AW: [navtexdx] Iran

Yahoo group: navtexdx (2015)
Date: 2015-11-06 18:24:51 UTC
From: Joachim Rabe
Topic: 11464 Message: 11478

Congrats, Roelof, that's a nice and rare catch and I must admit, I am a bit jealous!

Nothing at that time in my log on 518.

73s

Joachim Rabe
Norderstedt, Germany, JO53aq
Rx: JRC NRD-545, PERSEUS
Ant.: ALA100, HDLA-Loop, pa0rdt-MW, HDWA

Von: navtexdx@yahoogroups.com [mailto:navtexdx@yahoogroups.com]
Gesendet: Freitag, 6. November 2015 11:49
An: navtexdx@yahoogroups.com
Betreff: [navtexdx] Iran

Hello all,

For the first time ever, I have logged Iran on NAVTEX 518 kHz.
This one is very rare and has only been reported twice in REU.

The first time was by Brian keyte in March 2006, the second time was in March 2010 by Raimo Karjalainen.

Has anyone else logged this one last night?

I have rerun my PERSEUS recording to make sure that the header was from the same signal and it was.

P.S, I wonder why I bother about loop antennas now!

11479. Iran on 518 kHz

Yahoo group: navtexdx (2015)
Date: 2015-11-06 18:46:44 UTC
From: dl4ybp@...
Topic: 11479 Message: 11479

Hallo Roelof & all

Great catch, indeed. Congrats.

I looked into my files and found logs of an Iranian station received in 2013 and published in this list, however Busher not Bandar Abbas.

Yours is a truly new one. :-)

From: Roelof Bakker
Topic: 11464 Message: 11480

Hello Joachim,

Thank you and though I am receiving a bit of DX, I am not a
hard-core DX-er!

It is more a means to find out if my equipment is performing OK!

73,
Roelof

11482. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-11-07 09:18:16 UTC
From: dl4ybp@...
Topic: 7241 Message: 11482

Hi all,

This is the last night on the mini whip.
Signals from the north and south were stronger than on the ALA in east-west direction.
Malta better on the mini whip, Vardo and Alger not on the ALA.
Haifa and Ismailia almost the same.
Baku and Odesa stronger on the ALA.

73
Hans, DL4YBP

Receiver : Rohde & Schwarz & EK 071
Bandwidth: 600 Hz, AGC fast

Hello All,

Seemed to be a night that favoured propagation the Mediterranean region. Or, more accurately, that was about all that managed to get through.

Logs over 1500km

From: Chris Black
Topic: 11484 Message: 11485

Sorry, just joined and new to Navtex. What do the $03F, $19C mean? Also, I downloaded YaND and in looking at the schedule screen I don’t see most of my area IV stations?

Thanks and best de Chris

11487. Re: [navtexdx] Navtex log from Antwerp,BEL 20151107

Yahoo group: navtexdx (2015)
Date: 2015-11-07 19:07:00 UTC
From: Dirk Claessens
Topic: 11484 Message: 11487

Hello Chris,

Welcome to the group.
Navtex stations are formally identified by the Navarea they are located in, and an ID-letter.
There are 21 navareas, and the ID-letters range from A to X.
Logs are entered into the REU database. To distinguish Navtex entries from NDB/DGPS entries, a $-sign is prepended for the logs.
For 518 KHz, you should see 6 stations listed in the schedule:
04A Miami, 04E Charleston, 04F Boston, 04G New Orleans, 04N Portsmouth, 04R San Juan.

Regards - Dirk

Hi Chris,

Your original question was "why I don’t see most of my area IV stations?"
Since you live in Redmond,WA I figured you meant the US East Coast.
All navarea IV are present in Yand's database.

Regards - Dirk

Chris,

Oops, my old eyes misread WA (Washington) as VA (Virginia) twice.
The US West coast is navarea XII, not IV.

My apologies, I am just getting back into this and forgot that I am now living in area XII.
I used to live on the east coast. My apologies again.

11497. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-11-08 11:11:40 UTC
From: dl4ybp@...
Topic: 7241 Message: 11497

Hallo all,

Last night would have bee very boring without the mini whip.
Differences between the ALA and the mini whip can be striking and
puzzling. Sometimes the ALA produces better results and sometimes
it can be the opposite.

73 and have a nice Sunday.
Hans, DL4YBP

Receiver : Perseus and V40c software, bandwidth 250 Hz, AGC fast
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 & TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)
PC : Fujitsu notebook E 780, i7 CPU (5 years old), 512 GB SSD drive, Win 7

20151107 1745 518 $03K SVK Kerkyra,GRC 1657
20151107 1830 518 $03P 4XO Haifa,ISR 3060
20151107 2034 518 $02D EAR Coruna,ESP 1612
20151107 2122 518 $03I TAN Izmir,TUR 2084

Hello All,

Local storms. Antenna masts waving all over the gardens (my own garden, and my neighbours'). Lots of gale warnings from local transmitters interrupting the DX ;-(

Logs over 1500km

Session Report for David Atkins, GM8XBZ

11500. YaND question

Yahoo group: navtexdx (2015)
Date: 2015-11-08 16:56:00 UTC
From: Chris Black
Topic: 11500 Message: 11500

I just started with this software without much success so far here in WA state. Can someone help with setting an optimum input level when unattended. I want to be able to receive weaker stations but don’t want to clip on the stronger ones. Is something like 30% a reasonable compromise input setting when on idle?

thanks much
Chris

11501. Re: [navtexdx] YaND question

Yahoo group: navtexdx (2015)
Date: 2015-11-08 18:49:48 UTC
From: Robert W Strohmeyer
Topic: 11500 Message: 11501

I have the signal meter set for about 2% with no activity and I still
get about a 90 on the SNR meter for the weaker stations.

Thanks for that. I am about ready to give up. I had the input level at 30% for the last 4 hours and all I have are a few lines of gibberish. Even Astoria about 100 miles away didn’t decode.

I am out of ideas

Chris

Subject: Re: [navtexdx] YaND question

I have the signal meter set for about 2% with no activity and I still get about a 90 on the SNR meter for the weaker stations.

Hello Chris,

Have you tried the "Signal Polarity" knob at the upper right of the
YaND window?

Chris,

The average audio output level of all receivers I know of is largely independent of the HF input, thanks to AGC. So whether a weak or strong station is being received, audio levels will be the same. You cannot enhance reception of weak DX stations by pumping up the audio level.
regards Dirk

Have no idea what you just said
1) I am tuned to 518 on my SDR2
2) I open your application and see the signal humping where it is supposed to be
3) Your input meter is showing 30% (is that good or bad I don’t know)

All I know is that there is no decoding. A better answer would be to tell me how to achieve my desired result.

thanks
Chris

11512. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-09 09:02:37 UTC
From: Roelof Bakker
Topic: 70 Message: 11512

Hello all,

My NDB benchmark stations tell me that there is still fairly good T/A propagation. This does not show on NAVTEX reception on 518 kHz. This is probably due to co-channel interference and T/A fading during the assigned NAVTEX time slot!

A good chunk of Miami was received on the mini-whip and nill on the loops.

NAVTEX 490 kHz log over 1000 km large apperture loops:

```

Hi Chris,

-Have you selected the correct audio input? (See the Audio input button)
-Is the SDR set to USB or RTTY mode?
- Setting 518KHz only makes sense for RTTY mode, in USB the RX should be set to ~ 516.5, this will give a center audio frequency of ~ 1.5 KHz.
- Whatever the mode selected, and with a signal present,have you tuned Yand to the audio signal peaks, by clicking inbetween them?
- 30 % input looks fine. Input level is absolutely not critical, but avoid clipping. (See Scope > Raw)
- Finally, have you read Yand's user manual? :0)

Regards - Dirk

Hi all,

Slightly improved conditions, San Juan made it.
Very strong signal from Haifa.

Regards - Dirk

From: david
Topic: 9398 Message: 11515

Hello All,

On a night of many garbled messages, I was reflecting on the absence of Piombino from my log. A regular throughout the summer, even that station has been infrequent in the past week or so. Then, up came one of the clearest messages of the night, from San Juan over 6500km away. More champagne ;)

Logs over 1500km

From: Chris Black
Topic: 11500 Message: 11516

Dirk, thanks for that. In the past I have always used CW for decoding. Mu HDSDR does not have RTTY, so then you are saying that CW will not work? I guess this should be determined first n’est pas?

Chris

Subject: Re: [navtexdx] YaND question

Hi Chris,

-Have you selected the correct audio input? (See the Audio input button)
-Is the SDR set to USB or RTTY mode?
- Setting 518KHz only makes sense for RTTY mode, in USB the RX should be set to ~ 516.5, this will give a center audio frequency of ~ 1.5 KHz.
- Whatever the mode selected, and with a signal present,have you tuned Yand to the audio signal peaks, by clicking inbetween them?
- 30 % input looks fine. Input level is absolutely not critical, but avoid clipping. (See Scope > Raw)
- Finally, have you read Yand's user manual? :0)

Regards - Dirk

On 2015-11-09 at 0:09 , 'Chris Black' n1cp@comcast.net [navtexdx] wrote:

Have no idea what you just said
1) I am tuned to 518 on my SDR2
2) I open your application and see the signal humping where it is supposed to be
3) Your input meter is showing 30% (is that good or bad I don’t know)

All I know is that there is no decoding. A better answer would be to tell me how to achieve my desired result.

thanks
Chris

Subject: Re: [navtexdx] YaND question

Chris,

The average audio output level of all receivers I know of is largely independent of the HF input, thanks to AGC. So whether a weak or strong station is being received, audio levels will be the same. You cannot enhance reception of weak DX stations by pumping up the audio

level.
regards Dirk

Dirk [mobile]

I just started with this software without much success so far here in WA state. Can someone help with setting an optimum input level when unattended. I want to be able to receive weaker stations but don’t want to clip on the stronger ones. Is something like 30% a reasonable compromise input setting when on idle?

thanks much
Chris

Hi Chris,

CW could work, but make absolutely sure that the IF bandwidth is not narrower than 450Hz, or useful audio will be lost.
You also may have to change the BFO tone pitch to around 1KHz or so.

Roger that. Just tried USB 516.5 in SDR. Selected Microphone in the SDR and Microphone Realtek audio in YaND. Now I don’t have any signal at present but this is what I get with auto tuning on. it jumped around a bit and then settled down to this?

Hi Chris,

When using CW mode park your rx on frequency, 518.0. Like Dirk says "Stereo Mix" is usually the best. Give windoz and Yand a few seconds to make the change.

Then you should now see a small "hump" in the audio. As you already know move the yellow and red lines so that they are centered on the hump. Once you get them centered you can turn off "Autotuning" if on. You can fine tune later if needed when you get a good tx.

If you still get nonsense whilst decoding click the UoS box in the upper right corner.

Audio set up can be tricky for laptops. You may have to go into the sound system and make sure/adjust levels.

Chris,

This picture/setting looks fine (assuming the RX is tuned to the correct frequency), wait for a signal now.
UoS = Unshift on Space. Yand will enforce letters shift when a space is received.
It may enhance readibility for weak signals, but don't expect miracles.

Hi Chris,

First off, have you solved your Audio Input problems? You were having issues a couple of weeks ago with DGPS, and it could be a similar story here. Please make sure there is audio coming from your receiver to YaND. It has an adaptive input level, so if you are only giving it noise it will still show a 'hump' around the filter bandwidth as it boosts the noise to the level it expects for a signal. You can check by looking at the Signal tab of YaND. Better still, check if you can actually hear a Navtex signal if you listen to the radio's output?
If you have another receiver available, set it to receive the Navtex broadcast, and plug it into YaND's input ONLY after you are certain there is some audio available. Once you have a definite signal, you can set up YaND.

As Don suggested, you must select the correct audio input. YaND is good, but isn't psychic. All of us have made mistakes with selecting the correct input in our pasts ;)

And Roelof made an important point early on. Once the audio is piped into YaND, you need to select which sideband it is with the Normal/Inverted audio buttons. This varies from one receiver to another. Your ears can't tell the difference, but you will get full decodes with one setting and ABSOLUTELY NOTHING with the other [because, digitally, the signal is one-sided].

One step at a time, and you will get there.

Regards
David, GM8XBZ

Hi Chris,

Audio is frustrating these daze. If Stereo Mix is no good there must be another selection like "Microsoft Sound Mapping". You did have a good "hump" in one screen shot you sent.

You should get the Astoria transmission sked 24/7 but the others will be at night. You'll have to wait for a transmission again to try the UoS switch.

I have one PC where only the front audio jacks worked for input but as above you did have a "hump" at one point.

Thanks for that. Vern suggested using Stereo Mix so now have the following settings:

Computer mixer to Stereo Mix and slider at 82
Computer speaker audio slider at 50%
HDSDR set to 518 and ~450 Hz bandwidth
Yand input to Stereo Mix
Yand signal screen showing steady line at 70
Base noise level on HDSDR is about -90

base background noise heard through speaker OK

Best 73 de Chris

You can check by looking at the Signal tab of YaND.
Better still, check if you can actually hear a Navtex signal if you listen to the radio's output?
If you have another receiver available, set it to receive the Navtex broadcast, and plug it into YaND's input ONLY after you are certain there is some audio available. Once you have a definite signal, you can set up YaND.

As Don suggested, you must select the correct audio input. YaND is good, but isn't psychic. All of us have made mistakes with selecting the correct input in our pasts ;)

And Roelof made an important point early on. Once the audio is piped into YaND, you need to select which sideband it is with the Normal/Inverted audio buttons. This varies from one receiver to another. Your ears can't tell the difference, but you will get full decodes with one setting and ABSOLUTELY NOTHING with the other [because, digitally, the signal is one-sided].

One step at a time, and you will get there.

Regards
David, GM8XBZ

Thanks Don, Just passed Astoria, Kodiak and San Francisco, still nothing. am running Yand on the desktop. With laptops these days it is not possible to get a signal from one program to another as there is no MIC input. I guess VAC would work but my rocket Science certificate expired Winking smile

Hi Chris,

"Not a peep", literally? Did you hear a navtex signal on the RX?

I have attached a mp3-recording of a navtex signal from Hamburg, with an audio center frequency of 1700Hz.
Listen to it with Media Player or whatever, to get an idea of how this sounds.

To test, start up yand, set to 1700Hz, Autotuning On, signal polarity Normal.
Connect headphone output to Line In or Microphone input with a patch cable.
Play the recording, Yand should show this:

```
2015-11-09 19:05:54 33> {} NO.177
2015-11-09 19:06:01 53> NORTHFRISIAN ISLANDS. WESTERLY OF AMRUM ISLAND.

Chris,

The mp3 attachment in my previous mail can be played with MS Media Player.
Detach the mp3 and store it somewhere on the HD, then double-click it from there.
(Double-clicking it straight from your email app might work as well)

Media Player will send the sound to the PC's speakers/head phones.
When you connect the head phone output to the Line Input or microphone input, that input can then be selected as Yand's sound source.

Hi Chris,

Dirk means play the sound clip he provided and Yand should pick it up
and use it like a live signal. You might have to switch back to Stereo
Mix to do that....

Hi Chris,

Have you also connected headphone out to Line In or Microphone In AND selected that input in Yand?
You need to understand that Yand is not clearvoyant.
If line out of RX is connected to Line In => select Line In in Yand.
If line out of RX is connected to Microphone => select Microphone In in Yand.
If SDR is using VAC => select VAC in Yand

Microsoft sound mapper seems to work Ok, it shows a ~500Hz wide hump in the .doc you sent earlier.
The next step is to tune the receiver to the right frequency with a signal present.
You're close!

Hi all,

No propagation to the west. Even Iceland just sporadic.

73

11538. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-10 10:03:48 UTC
From: Roelof Bakker
Topic: 70 Message: 11538

Hello all,

T/A propagation was much worse last night and not a single trace was found. Joachim Rabe has been so kind to sent me a HDLA loop amplifier for testing and this has been used last night with a single 10 meter circumference triangle loop, directing east west.

Astrakhan produced three nice decodes on the loop and nil on the mini-whip, whilst Grindavik was not received on the loop and still made it on the mini-whip. Bodo, Vardo and Archangelsk did not make it on either antenna!

NAVTEX 490 kHz log over 1000 km large apperture loop:

11539. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-10 11:11:28 UTC
From: david
Topic: 9398 Message: 11539

Hello All,

No T/A for me, either. I had a couple of messages from Bodo and Vardo, but they are much closer to me than to most other reporters.
Despite the night's lack of DX, reception seems to have improved at the end of the night. Perhaps better conditions will come this evening.

Logs over 1500km

11541. Navtex logs from Whitley Bay, ENG

Yahoo group: navtexdx (2015)
Date: 2015-11-10 12:58:33 UTC
From: Mike Thayne
Topic: 6159 Message: 11541

Hello all,
Just an occasional log but no T/A, as noted in other logs last night. Try again!

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz
External soundcard Behringer UCA202
Decoder : YaND 6_4
Antenna : ALA100LN with 10m wire triangular loop

11542. Re: [navtexdx] YaND question

Yahoo group: navtexdx (2015)
Date: 2015-11-10 13:27:56 UTC
From: Chris Black
Topic: 11500 Message: 11542

Dirk, results of playing file you sent. these combinations showed the text just fine.

1) computer setting – stereo mix Yand input audio setting – Microphone (Realtek High definition)

2) computer setting – Microphone Yand input audio setting – Microsoft sound mapper and Microphone (Realtek High definition)

So I set up overnight (headphone out connected to mic in on computer) using the Microphone (mixer slider at 85-speaker audio slider at 75)/Microsoft sound mapper combination and just got line after line of gibberish, no decodes.

Chris

Subject: Re: [navtexdx] YaND question

Hi Chris,

Have you also connected headphone out to Line In or Microphone In AND selected that input in Yand?
You need to understand that Yand is not clearvoyant.
If line out of RX is connected to Line In => select Line In in Yand.
If line out of RX is connected to Microphone => select Microphone In in Yand.
If SDR is using VAC => select VAC in Yand

Microsoft sound mapper seems to work Ok, it shows a ~500Hz wide hump in the .doc you sent earlier.
The next step is to tune the receiver to the right frequency with a signal present.
You're close!

Regards - Dirk

Hi Chris,

"Not a peep", literally? Did you hear a navtex signal on the RX?

I have attached a mp3-recording of a navtex signal from Hamburg, with an audio center frequency of 1700Hz.
Listen to it with Media Player or whatever, to get an idea of how this sounds.

To test, start up yand, set to 1700Hz, Autotuning On, signal polarity Normal.
Connect headphone output to Line In or Microphone input with a patch cable.
Play the recording, Yand should show this:

```

Subject: Re: [navtexdx] YaND question

Chris,

This picture/setting looks fine (assuming the RX is tuned to the correct frequency), wait for a signal now.
UoS = Unshift on Space. Yand will enforce letters shift when a space is received.
It may enhance readibility for weak signals, but don't expect miracles.

Regards - Dirk

11543. TECH: loop antenna tests

Yahoo group: navtexdx (2015)
Date: 2015-11-10 13:39:37 UTC
From: Roelof Bakker
Topic: 11543 Message: 11543

Hello all,

Lately, I have been busy investigating reception on large aperture active loop antennas. In this case the loop is a triangle with sides of 3.33 meter. The circumference is 10 meter. The amplifier is connected to the middle of the base

Irrespective of the used amplifier, such a loop provides excellent broadband reception at HF.

I have also investigated reception at VLF and LF.

So far, I have tested a home made LZ1AQ loop amplifier, a HDLA and an ALA100. Before embarking on actual reception, I have measured the noise output of each amplifier with Linrad running a PERSEUS and an inductance connected at the input.

I have used an inductance of 2.5 uH, which is equivalent to the inductance of a ALA1530 loop frame and an inductance of 17 uH, which is the value found for a 10 meter circumference triangle loop.

Screen-shots of these measurements can be found on my web-space:

http://ndb0.home.xs4all.nl/Loops

Note that the Linrad settings are not the same for each measurement.

You will also find screen-shots with actual daytime reception of each loop amplifier compared to my standard mini-whip antenna.

This is an ongoing project and in due course I will provide results of overnight reception of long range NDB's.

Good amplifier specifications is important, however actual reception results for the band of interest is what it is al about.

Best regards,
Roelof Bakker, pa0rdt

11545. Navtex log from Antwerp,BEL 20151111

Yahoo group: navtexdx (2015)
Date: 2015-11-10 14:44:17 UTC
From: Dirk Claessens
Topic: 11545 Message: 11545

Hi all,

Interesting signals from the East, nothing from the West.
Log over 1500 km.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.4

From: Dirk Claessens
Topic: 11500 Message: 11546

Hi Chris,

The audio file you tested was recorded with a central audio frequency of 1700Hz.
YanD will remember its last frequency setting at the next startup, i.c. 1700.
If your RX was set to another frequency, say, 1200Hz, this cannot work.
(Note that Autotuning only works within the blue area on the spectrum!)

You need to tune the receiver during a live transmission, to bring the audio frequency anywhere within the range of ~800..1800Hz, this is not critical. Then click on the spectrum in Yand inbetween the 2 signal peaks.
You need to do this only once, assuming your RX remembers its last frequency/mode setting or can recall these.

Regards - Dirk

11548. Re: [navtexdx] TECH: loop antenna tests

Yahoo group: navtexdx (2015)
Date: 2015-11-10 19:39:28 UTC
From: Dirk Claessens
Topic: 11543 Message: 11548

Hi Roelof,

Interesting collection of measurements!
I have a question about noise floors though.
When (for instance) the plots of the HDLA (with the 17 microH induction connected) and the actual reception in the 0..40MHz range are compared, the noise floor of the actual reception graph is 10..20dB higher.
Is this only caused by your local noise levels, or is there also a sort of "intrinsic noise" involved, purely generated by the loop wire?

Thanks - Dirk

11550. Re: [navtexdx] TECH: loop antenna tests

Yahoo group: navtexdx (2015)
Date: 2015-11-11 09:09:01 UTC
From: Roelof Bakker
Topic: 11543 Message: 11550

Hello Dirk,

The LF plots are measured with a bandwidth of 1 kHz, to agree with Chavdars measurements.

From the Microtelecom website:

"The PERSEUS receiver can be operated also in a wide band mode as a 10 KHz - 40 MHz spectrum analyzer with more than 100 dB dynamic range in a 10 kHz resolution bandwidth."

Thus the wideband plots use a bandwidth of 10 kHz, which results in a 10 dB higher noise floor.

(Increase in noise power is 10*log(10khz/1kHz)= 10*log10= 10dB.)

The HF-Span plot of the mini-whip is completely flat.
This is due to the fact that during the measurent the antenna was double screened. Wrapped in aluminium foil and the whole assembly, including battery mounted inside a large coffee tin.

The loop amps were also mounted inside the coffee tin, but were not wrapped in aluminium foil, which results in some leakage, which can be seen between 10 and 20 MHz.
It is very difficult to achieve that amount of shielding next to my computer monitor!

73,
Roelof

Hi all,

Strange propagation last night. Many messages fron Ostend, DenHag
and the UK stations. Hamburg with garbled messages.
Nothing different on the ALA.

Very interesting measurements Roelof, indeed.

Hello all,

There was a good opening from Sydney, CAN NS around 06:30 UTC which is not in the NAVTEX time slot! Puorto Rico showed a lot of fading here and produced a good fragment on both antennas.

From: George
Topic: 11543 Message: 11553

Roelof: Thank you for posting the screen shots of your recent work comparing your MiniWhip with your large triangular loop. I find the "HDLA-Mini-Whip ... " series particularly enlightening.

Seems that except for a few instances in which the MiniWhip hold sway, there is a 1:1 correspondence in the signals displayed from both antennae although not necessarily in their strength. I expect that the loop loses out in these few instances because of its directional characteristics.

Also I presume that 'leveling the playing field' for such a comparison is the reason you propose to construct, or have constructed, an 'omni-directional' loop by combining the signals from a pair of orthogonal loops with a two-port signal splitter run 'in reverse'.

As I view the matter such a solution introduces a problem ... a splitter, run in either direction, necessarily introduces at least a 3-dB signal loss which, in a simple direct comparison, would place the loops at a disadvantage with respect to the MiniWhip. However I am certain that you have already considered the matter and will or already have found a way to handle this problem.

I am also currently endeavoring to 'vector add' signals from an orthogonal pair of loops but am using a different approach ... the Bellin-Tosi stator/rotor scheme as used in RDF work. But this scheme likely would not work for your purpose ... the B-T approach is generally a narrow-band method ... my home brew hardware requires 'twiddling' of four knobs to optimize the strength of the received signal.

It is becoming clear to me that, at least for my purpose, unless a wideband B-T unit can be developed in hardware, a 'vector add' computer software approach is the 'way to go'.

Subject: [ndblist] TECH: loop antenna tests

Hello all,

Lately, I have been busy investigating reception on large aperture
active loop antennas. In this case the loop is a triangle with sides
of 3.33 meter. The circumference is 10 meter. The amplifier is
connected to the middle of the base

Irrespective of the used amplifier, such a loop provides excellent
broadband reception at HF.

I have also investigated reception at VLF and LF.

So far, I have tested a home made LZ1AQ loop amplifier, a HDLA and an ALA100. Before embarking on actual reception, I have measured the noise output of each amplifier with Linrad running a PERSEUS and an inductance connected at the input.

I have used an inductance of 2.5 uH, which is equivalent to the inductance of a ALA1530 loop frame and an inductance of 17 uH, which is the value found for a 10 meter circumference triangle loop.

Screen-shots of these measurements can be found on my web-space:

http://ndb0.home.xs4all.nl/Loops

Note that the Linrad settings are not the same for each measurement.

You will also find screen-shots with actual daytime reception of each loop amplifier compared to my standard mini-whip antenna.

This is an ongoing project and in due course I will provide results of overnight reception of long range NDB's.

Good amplifier specifications is important, however actual reception results for the band of interest is what it is al about.

Best regards,
Roelof Bakker, pa0rdt

11560. Navtex logs from Whitley Bay, ENG

Yahoo group: navtexdx (2015)
Date: 2015-11-12 14:20:27 UTC
From: Mike Thayne
Topic: 6159 Message: 11560

A chance to use my miniwhip last night because my local interference around 518khz suddenly disappeared yesterday. The ALA100ln loop does a good job in nulling it out but overall results from
all directions are always better using the miniwhip. I wonder if my interference problems has gone
for good, time will tell.

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz
External soundcard Behringer UCA202
Decoder : YaND 6_4
Antenna : Miniwhip PA0RDT circuit at 7m agl

11562. Navtex log from Antwerp,BEL 20151112

Yahoo group: navtexdx (2015)
Date: 2015-11-12 19:02:09 UTC
From: Dirk Claessens
Topic: 11562 Message: 11562

Hi all,

A short log, with thanks to the sun.
I'm a bit unsure about the Nuuk log.
The ID-letter and the time seem to fit, but it's a short fragment.
Anyone catched more?

Regards - Dirk

QTH : South of Antwerp, Belgium

Topic: 5417 Message: 11563

Hello everyone , calm conditions.

I'm trying a new receiver with very interesting features: AFE822x SDR-Net Dual Channel
With this receiver, you can receive two channels simultaneously with different antenna using two data streams over LAN .
Moreover, the two channels can be combined using the diversity mode or by phasing.
With this receiver I can open two studio1 instances and receive 4 navtex channels (2 on 518Khz and 2 on 490Khz) with different antennas (mini -whip and ALA 1530) all over the LAN.

My logs:

11564. PC Navtex Engine - advice please

Yahoo group: navtexdx (2015)
Date: 2015-11-12 22:33:01 UTC
From: raybla2002@...
Topic: 11564 Message: 11564

Hi all can anyone advise me please if I can use this PC Navtex Engine with any other software apart from Smartcoms own I dont want to spend £50 on this software - I would also like to know if I could interface the output into another radio so that I could use the audio signal into say Yand software - any advice many thanks Ray

11565. RE: [navtexdx] PC Navtex Engine - advice please

From: david
Topic: 11564 Message: 11565

Hello Ray,

It looks as though this 'engine' only produces an RS232 output. That won't feed into another radio in a straightforward way. A software engineer could possibly write some code that would produce text on screen for you, but we don't know what format the 'engine' uses for its output. Simplest answer is to feed the audio from a cheap receiver into YaND.

It probably depends on what you want to do. The PC Navtex Engine isn't a terribly sensitive receiver. A cheap portable will probably detect signals from equally distant stations. If all you want to do is follow local messages, it will be fine [once you have the software]. If you want to chase more distant Navtex stations, you would be better off using YaND and a good receiver.

Regards
David,GM8XBZ

11568. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-11-13 10:46:28 UTC
From: dl4ybp@...
Topic: 7241 Message: 11568

Hi all,

I had prepared a log that was very similar like the one from the night before, rather boring . Then after a mouse click my notebook froze and all was gone.
As I am too lazy to start from scratch again I just list last night's highlight. Sao Miguel popped up like a Jack in the Box.

I am not sure if my 'observation' is serious, but I have the feeling that propagation shortly before and after we change from summer to winter time is elevated.

73

Hallo Dirk,

zou dit iets kunnen zijn uit Libië? Het telefoonlandennummer van Libiê is 218.

Of is het toch Malta (volgens de schedule heeft die op dat uur een uitzending!)

73

Hi Hugo,

The latest info on the Surt station in Lybia station dates back to
2009/2010.
A transmitter was installed, with testing scheduled for 2010.
The Kelibia station in Tunisia was tested in September 2009, I could
log a test transmission:
20:06:41> TEST-TEST KELIBIA STATION TRANSMITTER
20:06:44> 15-09-2009
20:06:48> TRANSMITTED AT 2000 UTC

11578. RE: [navtexdx] Re: PC Navtex Engine - advice please

Yahoo group: navtexdx (2015)
Date: 2015-11-13 22:03:30 UTC
From: Geir Laastad
Topic: 11564 Message: 11578

Hello Ray,
I got courius and are wondering what hardware and expired software you are using.Is it this one? www.pcnavtex.com/Home/tabid/38/language/en-GB/Default.aspx
If not, do you have links to the hardware and software products?
Thanks...
RegardsGeir, LA6LU

Subject: [navtexdx] Re: PC Navtex Engine - advice please

Hi David many thanks for your reply, its just that I have this PC navtex engine and it seems to work ok on local stations however the trial software has expired and thats made it not work any more I may just give up on that then and go the way you explained with a radio and YaND that seems to be a nice software package for use with the PC - many thanks for your help good navtex dx regards Ray

11582. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-14 13:06:24 UTC
From: david
Topic: 9398 Message: 11582

Hello All,
All the Norwegians and Swedes were there [under 1500km], but it was as if a cordon had been thrown at around 2000km from here, and very few signals made it beyond that. A dull night, indeed.

Logs over 1500km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

11583. RE: [navtexdx] Re: PC Navtex Engine - advice please

Yahoo group: navtexdx (2015)
Date: 2015-11-14 13:09:34 UTC
From: raybla2002@...
Topic: 11564 Message: 11583

Hello Geir - thanks for your interest yes the link you provided is the software that I am useing downloaded from Smartcoms website http://www.smartcomsoftware.co.uk/downloads.html http://www.smartcomsoftware.co.uk/downloads.html
The Navtex engine is PC Navtex Engine 9600 baud output - suitable for Raymarine C & E series - Pc Navtex Pro I think its just a basic engine not one that will store any data like some do - I am useing the two frequency Nasa antenna 490khz 518khz that was with it - the software has the option to switch to either freq - David has advised me that it may be better to go down the road of useing a suitable radio (I have a Icom PCR1000 that should do the job I think) and the YaND software it may be a better idea for Navtex Dx - regards Ray

From: Dirk Claessens
Topic: 70 Message: 11585

Hello Roelof,
My Yand also catched a fragment of "Samsun" ('E' + 'TURK')
But this seems to be "Cyprus Turkish Radio" surfacing again, or at
least part of it, very bad copy.

Regards - Dirk

Hi Hugo,

I dont't think so, from 20:51..20:54 I logged Antalya, see below.
In your log lines:
2015-11-13 20:50:41> PA~T ~:SYNO~SI O~
2015-11-13 20:54:42> ~~~~AC~*{}*B$~(
3~~~~~~*{}*WFM~T~W~~Z~~*{}*I~PEZ~~~~~*{}*B~UB1,-??~~?~~+#~~/~!~~&~*{}*~
several accolade pairs are showing, indicating Yand lost sync.
Also note the 4-minute time gap where nothing was received.

Regards - Dirk

```

I have seen more messages lately of <CYPRUS TURKISH RADIO>.
Are these messages really transmitted from Cyprus?

If they come from Samsun, they might be treated as such!

73,
Roelof

Hello Dirk,

Thanks (again!) for clarification! It is now clear it was Antalya I received with a message.

73,

Hugo

Subject: Re: [navtexdx] NAVTEX from Zealand, HOL

Hi Hugo,

I dont't think so, from 20:51..20:54 I logged Antalya, see below.
In your log lines:
2015-11-13 20:50:41> PA~T ~:SYNO~SI O~
2015-11-13 20:54:42> ~~~~AC~{}B$~(
3~~~~~~{}WFM~T~W~~Z~~{}I~PEZ~~~~~{}B~UB1,-??~~?~~+#~~/~!~~&~{}~
several accolade pairs are showing, indicating Yand lost sync.
Also note the 4-minute time gap where nothing was received.

Regards - Dirk

Hello Hugo,

Thanks for that. So these were genuine Samsun messages followed by one of Cyprus Turkish Radio around 20:47.

Regards - Dirk

From: Geir Laastad
Topic: 11564 Message: 11593

Hello Ray,
Yes I agree that Yand is a better way, but I did test the PC Navtex Engine once. The one I tried belonged to a friend who had it in it's boat. He lent it to me for a while so I could test it. What I found is that it is actually quite sensitive, **BUT** also very sensitive to local noise, so be careful not putting it too close to your PC's power suppy and also not near those lousy swicth mode power adapters used for routers and such things. That is a killer because the plastic PC Navtex Engine case is not shielded at all. It is therefore very sensitive to local noise and that can easily make you think it's not sensitive. One thing you could try is to wrap it's case using aluminium foil so that just the cables comes out. Also try to ground the coax, preferably as close to the antenna as possible. That means you have to cut the coax near the antenna and put in two PL or BNC plugs with a middle adapter. From there you go to a ground rod. If you do not like that idea because of the cutting of the coax, you may also try connecting a ground wire to the antenna jack on the Engine itself, using an alligator clip from the ground wire.
Eventually, Yand have had to support the PC Navtex Engine's serial output and that's not the way Yand is built (to my knowledge). So if you want to use Yand, you must use something (radio) which generates audio for your soundcard and Yand. I have no time for doing more (Navtex) activities myself for the moment, but Yand is much better than anything else when it comes to logging and identification. So a sensitive radio and Yand is probably the best way to go for a Navtex DX'er. Yand's logging output can be cut and pasted as it is and posted at the Navtex group. With all other software I know about, you have to edit the data first.

Hello Geir - thanks for your interest yes the link you provided is the software that I am useing downloaded from Smartcoms website http://www.smartcomsoftware.co.uk/downloads.html The Navtex engine is PC Navtex Engine 9600 baud output - suitable for Raymarine C & E series - Pc Navtex Pro I think its just a basic engine not one that will store any data like some do - I am useing the two frequency Nasa antenna 490khz 518khz that was with it - the software has the option to switch to either freq - David has advised me that it may be better to go down the road of useing a suitable radio (I have a Icom PCR1000 that should do the job I think) and the YaND software it may be a better idea for Navtex Dx - regards Ray

Hello Dirk,
I think it was yesterday I saw it, but I also got "Turk" something on one of my automatic downloads -if you want to compare.I am not sure if I saw that same message, but if interested you can try to find it here: www.navtex.net

Hello Roelof,

My Yand also catched a fragment of "Samsun" ('E' + 'TURK')

But this seems to be "Cyprus Turkish Radio" surfacing again, or
at least part of it, very bad copy.

Regards - Dirk

Hi Roelof,

The location of the station identifying itself as Cyprus Turkish Radio is unknown.
It used the X and the E identifier in the past, and the officially assigned station 5B4 responsible for the Cyprus sea area has complained about the illegal transmissions many times. Given the fact that reports from this illegal station are usually rather weak and fragmented in Europe, and that it pops up in the logs at irregular dates/times, I can only guess the origin is some obscure "nagging station" on Turkey's SW coast operated by the Turkish government/army.

regards -Dirk

Attachments: 1 described; binary payloads are missing from this source WARC

As you can see, here is a very respectable signal from presumably San Francisco as I move into grayline showing on the HDSDR (computer audio slider at ~80% and HDSDR sliders at ~75%)
I am concerned that I see no log for this transmission. Obviously the antenna is doing its job and HDSDR is doing its job.
If there are any settings that I overlooked, please let me know.

Best de Chris

Hi Chris,

Well, to me your signal level is low and the s/n is low as well. So I would say it is a noisy weak signal. Have you tried clicking on the UoS box? If it was on the right side you should see at least some words but I don't see any.... What did HDSDR say about the signal strength of this signal?

From: Chris Black
Topic: 11596 Message: 11598

But if you look at the shot there is plenty of signal showing on HDSDR snd the YaND peaks look good as well. The weird thing is that I have no problems with SeaTTY and DGPS seems to work fine with DSCdecoder. Just tried DSC on DSCdecoder without much luck but am going to try YaDD soon. The problem with the laptop is that it is impossible to get audio into a decoding program without virtual audio cables.As a control I will try running a cable from the audio out of the laptop into the MIC input on another computer.Chris

From: Roelof Bakker
Topic: 70 Message: 11600

Hello all,

At the moment I am making two Linrad overnight recordings. One with my PERSEUS / Mini-Whip and the other with my Afedri / ALA100 triangle loop.

Using fast playback in Linrad, I can make plots of reception of e.g. NDB QY-263, Sydnay, CAN NS and DDP-391, San Juan, Puerto Rico.

Due to this set up, I can't use 490 kHz, so this is not included in my report.

Mario, do you use your AFE822x SDR-Net (Dual Channel)in LAN or USB mode?

NAVTEX 518 kHz log over 1000 km large apperture loop:

The following logs with the ALA1530 east-west, the R&S EK070 and my 10 year old notebook suitable
only for TrueTTY. YaND is too demanding lifting the CPU load up to appr. 80%

There is hardly any difference. Just one more log.

Hello Roelof & all,

I use Afedri822x Dual Channel in LAN mode with 2
data streams and 2 Studio1 istances from different directory:

-
stream1: 100000 network sample rate on 5001 UDP port from first control
box istance;
- stream2: 100000 network sample rate on 5002 UDP port from
second control box istance.

Every Control Box istance has own file .ini
from different studio1 directory.
With one receiver I can monitor 4
navtex channel with 2 different antenna.

73, Maurizio

Hello Geir many thanks for your kind reply Its interesting reading your message about screening of the plastic navtex box also on earthing matters relating to interferance from psu and other electrical devices I will take this all on board and test a few ideas - I will be trying out the Icom PCR1000 shortly to see what results I can get by way of Navtex Dx - regards Ray

Hello Maurizio,

Thank you for the information on running the Afedri in Dual Channel mode. I may use this setup in the future, however at the moment I am looking for a way to run it as two independent receivers with two instances of Linrad.

I should like to make two Linrad overnight recordings and use Linrad in fast playback mode to monitor reception on two different antennas over the course of the night.

Linrad does not need the Control Box software to run.

So far I have Linrad running in single channel mode (either channel) and in dual channel diversity mode.

There is very little information how to set it up under Linrad to be found!

Could you sent me direct a screenshot of the Network tab window of your Control Box settings? And also of your Multi Channel RX window?

Thank you in advance,
Roelof Bakker, pa0rdt

11606. Re: [navtexdx] YaND sensitivity

Hi Chris,

I agree with Don, this is a rather weak signal and SNR is almost at zero.
Especially on laptops though, it is absolutely necessary to check the
sound card's sample rate with Yand's calibration function.
Use the mp3 file I sent you earlier to do this. Sound cards of laptops
can have sample rates errors of 5%.
Without calibration, this will cause Yand to sample a 100 baud signal at
105 baud.

Regards - Dirk

From: Chris Black
Topic: 11596 Message: 11607

Thanks Dirk. Couple questions. 1) not sure I could accomplish your calibration procedure without some very precise instructions but does that address the input level problem? 2) I am running YaDD but really don’t know what I am seeing. the levels look low as well. Does your calibration procedure address that program as well?

best, Chris

Subject: Re: [navtexdx] YaND sensitivity

Hi Chris,

I agree with Don, this is a rather weak signal and SNR is almost at zero.
Especially on laptops though, it is absolutely necessary to check the sound card's sample rate with Yand's calibration function.
Use the mp3 file I sent you earlier to do this. Sound cards of laptops can have sample rates errors of 5%.
Without calibration, this will cause Yand to sample a 100 baud signal at 105 baud.

Regards - Dirk

On 2015-11-15 at 4:52 , Chris Black n1cp@comcast.net [navtexdx] wrote:

But if you look at the shot there is plenty of signal showing on HDSDR snd the YaND peaks look good as well. The weird thing is that I have no problems with SeaTTY and DGPS seems to work fine with DSCdecoder. Just tried DSC on DSCdecoder without much luck but am going to try YaDD soon. The problem with the laptop is that it is impossible to get audio into a decoding program without virtual audio cables.
As a control I will try running a cable from the audio out of the laptop into the MIC input on another computer.

Hi Chris,
To further illustrate my point regarding the noise floor, below is a screenshot of Yand decoding a weak signal.
CRF (the new SNR in the next version) is about 10%, decoding works but errors are present.
The noise floor is at ~ 1/3 of the spectrum height; in your screenshot it was at ~ 50%.
Also note that the spectrum is auto-scaled: no matter how weak or strong a signal is, the highest peak will always be at 100% of the scale.

Regards - Dirk

Hi Chris,

Calibration corrects for eventual sample rate errors of the soundcard.
Your audio input level seems fine on the screenshot in your previous mail.
You will not get better decodings of DX by pumping up the audio level:
the SNR will simply remain the same.
The calibration procedure is explained on page 11 of Yand's user manual,
and is also applicable to YaDD: baud rate and modulation of Navtex and
DSC are identical.

Regards - Dirk

Hi Chris,

"Not a peep", literally? Did you hear a navtex signal on the RX?

I have attached a mp3-recording of a navtex signal from Hamburg,
with an audio center frequency of 1700Hz.

Listen to it with Media Player or whatever, to get an idea of how
this sounds.

To test, start up yand, set to 1700Hz, Autotuning On, signal
polarity Normal.

Connect headphone output to Line In or Microphone input with a
patch cable.

Play the recording, Yand should show this:

2015-11-09 19:05:54 33> {}

Subject: Re: [navtexdx] YaND question

Chris,

This picture/setting looks fine (assuming the RX
is tuned to the correct frequency), wait for a
signal now.

UoS = Unshift on Space. Yand will enforce letters
shift when a space is received.

It may enhance readibility for weak signals, but
don't expect miracles.

Regards - Dirk

Hi all,

Not very much different from the nights before. Signals from the north and south were stronger on the mini whip. Bodo and Vardo at 0409 and 0415 UTC only on the mini whip.
Not inspiring as Dirk says, indeed. Better luck next time.

73
Hans, DL4YBP

Receiver : Rohde & Schwarz & EK 071
Bandwidth: 600 Hz, AGC fast
Antenna : PA0RDT's mini whip

Hello All,

Some early evening promise, with Norwegian stations from 1000 to 1300km coming in strongly through the day. But things went rapidly downhill as the night wore on.

Logs over 1500km

Hello all,

Propagation is still jumping up an down.

Last night I have made plots of propagation from Puerto Rico over a 7000 + km path. The time runs from bottom to top between November 15 22:00 UTC and November 16 08:00 UTC.

I find it quite reassuring that the mini-whip and large aperture loop produced completely identical results!

This is the upper sideband of NDB DDP-391. Note the keying sidebands. There is a very small difference in strength, but this is due to the screen settings of Linrad.

NAVTEX 518 kHz log over 1000 km large apperture loop:

11620. Re: NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-16 18:12:50 UTC
From: dl4ybp@...
Topic: 70 Message: 11620

Hallo Roelof,

I just see the word graphic on the screen but not your illustration.
What can I do to make it visible?

Thanks and 73

Hans, DL4YBP

11621. Navtex log from Antwerp,BEL 20151116

11622. Navtex Logs from Brier, WA

Yahoo group: navtexdx (2015)
Date: 2015-11-16 21:54:38 UTC
From: k7wv@...
Topic: 11622 Message: 11622

Some Navtex decodes over the past few nights. Guangzhou on 4209.5 is a new one for me. 518 Khz was below average. The 12:20 utc transmission from Nha Trang is in Vietnamese.

11623. Navtex logs from Whitley Bay, ENG

Yahoo group: navtexdx (2015)
Date: 2015-11-17 12:57:53 UTC
From: Mike Thayne
Topic: 6159 Message: 11623

Hello All,
Interesting path open to Egypt but not much else and still no T/A for me.
Logs over 1500Km.

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz
External soundcard Behringer UCA202
Decoder : YaND 6_4
Antenna : Miniwhip PA0RDT circuit at 7m agl

Hello All,

Once again, there was a lot of optimism with reception at local dusk, but the rest of the session was disappointing.

Logs over 1500km

11625. Navtex log from Antwerp, BEL 20151117

Yahoo group: navtexdx (2015)
Date: 2015-11-17 14:51:16 UTC
From: Dirk Claessens
Topic: 11625 Message: 11625

Hi all,

As Mike noted, interesting opening to Egypt.
Note the systematically malformed "ZCZCNLJ" headers of Alexandria.

Regards - Dirk

11626. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-17 15:07:53 UTC
From: Roelof Bakker
Topic: 70 Message: 11626

Hello all,

For once there appeared to be no propagation whatsoever from Puerto Rico. So I wonder if anyone did catch anything from there.

SUH, Alexandria has been absent for quite some time, but last night several messages were found, albeit all with a typo in the header!

NAVTEX 518 kHz log over 1000 km large apperture loop:

Hello all,

conditions quiet; good decodes from Quseir and Ismailia, but nothing from Alexandria.

My logs:

Hi all,

Not a very interesting night concerning propagation.
Roelof, your DDP-391 graphic is very impressive.

Does anyone have an idea of where this is? I used a Beverage antenna in the direction of Central America.(270°)
It’s a log from yesterday morning.

From: Dirk Claessens
Topic: 11629 Message: 11630

Hello Hugo,

This trick doesn't work always, but this time it did: I entered part of your message into Google:
FRONT WEAKENS AND STALLS FROM 31N75W TO WEST PALM BEACH BY EARLM FRI
and then selected the cached version of the first hit found (select "cached" from the down arrow menu next to the link)
and it came up with this:

<http://webcache.googleusercontent.com/search?q=cache:A8P9QxQePBUJ:forecast.weather.gov/shmrn.php%3Fmz%3Damz125%26syn%3Damz101+&cd=1&hl=en&ct=clnk&gl=be>

***.*A COLD FRONT EXTENDING FROM 26N65W TO THE NE BAHAMAS THEN STATIONARY TO SE FLORIDA WILL STALL TONIGHT AND DISSIPATE THROUGH MONDAY. SE FLOW INCREASES TUE N OF 27N AHEAD OF ANOTHER FRONT EXPECTED TO MOVE OFF THE NE FLORIDA COAST LATE WED NIGHT OR EARLY THU. FRONT WEAKENS AND STALLS FROM 31N75W TO WEST PALM BEACH BY EARLY FRI. NORTHERLY SWELL WILL FOLLOW THE FRONT INTO THE WATERS OFF NE FLORIDA BY LATE FRI.

This strongly looks like a 04A Miami message...

Regards - Dirk

Hello Hugo,

My guesstimate would be 04A Miami. There is a NOAA website where you can
look up the messages if they are no more than about a day old and compare.

From: dl4ybp@...
Topic: 7241 Message: 11633

Hi all,

Quite a large number of garbled messages even of usually stronger station.
This hints at a lot of QRM from overlapping stations.

Hello all,

Propagation is still not great and a hoard of off schedule gale warnings did not help either!

NAVTEX 518 kHz log over 1000 km large apperture loop:

11636. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-11-18 15:43:23 UTC
From: mao_r1@...
Topic: 5417 Message: 11636

Hello all,

nothing spectacular, but good decodes from Las Palmas,CNR on 490 Khz and Alexandria on 518 Khz;
I don't know why, but I think Alexandria header was not correct and Alexandria was not recognized.

My logs:

From: Maurizio Marini, IW2GOB
Location: Lodi, North Italy
45 17 96 N, 09 31 24 E, Locator: JN45SH
Receiver: Afedri AFE822X Dual Channel
Filter 500 kHz,AGC MID,CW
Decoder: YaND 6.4 + Studio 1 + VAC
Computer: Intel E8500 CPU, 4 GB RAM
Aerial: ALA 1530S+ W<->E @16m

From: david
Topic: 9398 Message: 11637

Hello All,

Either conditions are terrible or I have a receive-chain problem. A very short log.
As Hans and Roelof pointed out, there were a large number of local warnings that didn't help the DX.

Logs over 1500km

Session Report for David Atkins, GM8XBZ

Hello Maurizio,

The same happened to me yesterday, the Alexandria headers are malformed.
Yand will see ZCZCNLJ94 as ZCZC LI94, hence the UNID.

Regards - Dirk

Hello Dirk and Don,

Thanks for the confirmation of O4A Miami and of course also for those very interesting (identification) tips.
73,

Hugo

Hello Hugo,

My guesstimate would be 04A Miami. There is a NOAA website where you can
look up the messages if they are no more than about a day old and compare.

Hello David,

>>> Either conditions are terrible or I have a receive-chain problem. <<<

I don't think you have a problem, propagation is rather poor.
However amazingly, I have still traces of YQ-305, Churchil, CAN MB, bordering aural copy!

73,
Roelof

11643. Navtex from Lübbecke

From: dl4ybp@...
Topic: 7241 Message: 11643

Hi all,

The many messages of almost all major European Navtex stations due to bad weather and lots of traffic in the English Channel and the Mediterranean does not leave much room for DX.

For the first time I have used the new Perseus software V5 alpha.

11644. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-19 10:53:57 UTC
From: david
Topic: 9398 Message: 11644

Hello All,

Well, some improvement. Still very poor compared with October.
I seem to be in a 'sweet spot' for Mondolfo and Coruna, both of which
provide good copy throughout the day. Canada and the USA, however, continue
to hide themselves away.

Logs over 1500km

11646. Navtex log from Antwerp, BEL 20151119

Yahoo group: navtexdx (2015)
Date: 2015-11-19 16:00:42 UTC
From: Dirk Claessens
Topic: 11646 Message: 11646

Hi all,

Egypt keeps popping up in the logs, perfect copy from Cyprus Turkish Radio disguised as Samsun, and Alexandria keeps sending malformed headers, although not for all messages.

Regards - Dirk

11648. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-11-19 17:45:31 UTC
From: mao_r1@...
Topic: 5417 Message: 11648

Hello all,

not so bad and a garbled message from San Juan (I think) at early 23:18 UTC.

My logs:

```
From: Maurizio Marini, IW2GOB
Location: Lodi, North Italy
45 17 96 N, 09 31 24 E, Locator: JN45SH
Receiver: Afedri AFE822x SDR-Net Dual Channel
Filter 500 kHz,AGC MID,CW
Decoder: YaND 6.4 + Studio 1 + VAC
Computer: Intel E8500 CPU, 4 GB RAM
Aerial: ALA 1530S+ W<->E @16m

11656. Log 518 kHz, Rotterdam HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-21 08:58:38 UTC
From: Vincent Schriel
Topic: 9427 Message: 11656

This is my last log for now. We bought a new house and will be moving before the end of the year. In the spring I will install the new antenna mast. I hope that everthing is working in juni 2016.

Vincent

Hi all,

Log similar to the nights before.

Good luck with moving Vincent and good DX at your new QTH.

73 and have a nice weekend.
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
(52.2962N 8.61468E - Locator JO42HH)
In Google Earth you can see my ham radio beam.
Receiver : Rohde & Schwarz & EK 071, bandwidth 600Hz, AGC fast
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4

From: david
Topic: 9427 Message: 11658

Hello Vincent,

I shall miss your logs, but I know very well the issues with a new house. I hope you were able to find a house with all the features a radio-listener needs ;) But mostly, we all wish you and your family every happiness in the new home.

Best Wishes
David, GM8XBZ

Subject: [navtexdx] Log 518 kHz, Rotterdam HOL

This is my last log for now. We bought a new house and will be moving before the end of the year. In the spring I will install the new antenna mast. I hope that everthing is working in juni 2016.

Vincent

Hello All,

I suppose I should be pleased that the experiments with a Force Field seem to be successful. Something seems to be keeping the DX out of my antenna.

<sigh>

From: Mike Thayne
Topic: 6159 Message: 11661

Hello All,
Logs from last night, I think the UK/EIRE storm warnings etc may have been a hinderance.
Only fragments from Egypt so nothing recorded from there.

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz
External soundcard Behringer UCA202
Decoder : YaND 6_4
Antenna : Miniwhip PA0RDT circuit at 7m agl

11662. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-21 18:37:05 UTC
From: Roelof Bakker
Topic: 70 Message: 11662

Hello all,

Mike, there is T/A propagation, albeit rather weak.
The beauty of my Linrad overnight investigations is that long before aural copy is possible, traces are clearly visible.

Last night propagation was favouring the North and many NDB signals from Nunavut could be spotted. However only a few could be heard by ear and thus identified proper.

The same applies to QY-263, Sydney, CAN NS and DDP-391, San Juan, PTR: only weak traces. I gather that when a powerful NDB can not be unearthed in a 10 Hz bandwidth, chances are slim for a decode from a NAVTEX station from the same location!

NAVTEX 518 kHz log over 1000 km large aperture loop:

Roelof, David,

Thanks. I stay in Rotterdam, just moving 700 meter. Our house is a monument and will be renovated within a year. So it was time to look for something else.
For my radio hobby it is going to be a better place. The antenne will be 12 meters from the house, now it is 6. The ALA 1530 comes on top of the mast, right under the ALA two mini-whips. The top of the mast is going to be 5 meters high. Only problem: I need 40 meter coax from the radio's to the antenne and the cable must go underground to the end of the garden. Digging in the winter is not my cup of tea, so I wait till spring.

Vincent

Hello Roelof,

I follow all your Linrad investigations with great interest.
I fear my PC is just not man enough to cope with the extra demands, it seems to run on the edge now when I have a few programs running. That maybe is an excuse because I do get a bit worried when I read about the learning curve when getting started with Linrad, so it may not be for me.
Like the old lady with her knitting needles, I still have all my soldering skills which I find easier to handle now rather than learning new operating and set up procedures!
I made and successfully used the 10/12Hz audio filter from your design notes, if only things were as simple today.

Anyway, great if you keep us informed on your progress and maybe a "simple to use" version may come along one day.

Best regards,

Mike, g3gms

Hello all,

I am back on my previous NAVTEX reception set up: an Afedri SDR running two Studio 1 software receivers to enable reception on 490 and 518 kHz.

The loop tests have been postponed for now as the picture is clear. I am busy with a few other projects and in due course I will get back to the loops.

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20151121 1911 490 $02T EAC Tarifa,ESP 1856
20151121 1933 490 $03M EAV Cabo de la Nao,ESP 1445

Hi all,

What a dull Navtex night. The sun seems to be unpredictable at the moment.
Last night German hams could work Australia on the 80m band. That might hint at
good propagation on lower frequencies A few minutes ago however I could see PSK31
signals from Australia and New Zealand on 24.9 MHz via the long path.

Hello Hans,

This time of the year often has poor propagation.
It even has a name: Mid-Winter Anomaly.
What often happens is that by magic the band opens just after X-Mas!

Looking at my overnight plots, the T/A path is still there but weak.
You might say that openings are lurking around the corner!

One can only wait, but it is nice to know the state of affairs.

73,
Roelof, pa0rdt

Hello Mike,

Yes, to make the best of Linrad, you need a powerful computer.
It happens that I build a new one just a year ago and rather than spending money on more SDR hardware, I invested a bit in this computer.

Over the years, I have improved my reception set up, but only lately I have started using Linrad. Just like many others, I was scared away due to the steep learning curve.

I spend many hours watching Leif's video's and what I saw motivated me to go ahead with it. What I find fascinating is watching how propagation develops overnight. With 120+ Canadian NDB's in my log, it is also the only way to find new ones, I'm afraid!

However, watching daytime signals is interesting as well.
At the moment (10:25 UTC), I am receiving a clear trace of YQ-305, Churchill, CAN MB, 5711 km away! No trace of LT-305 yet, but that will change as we are heading for Winter Solstice.

Linrad will also run on a Samsung NC-10 Netbook, but with less resolution of the minimum bandwidth setting.

Maybe I should start a Blog and upload the overnight plots on a daily basis!

73,
Roelof, pa0rdt

Hi all,
Monitoring started quite late, but looking at other's reports, I don't think I've missed anything...

Regards - Dirk

11675. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-23 09:02:53 UTC
From: Roelof Bakker
Topic: 70 Message: 11675

Hello all,

Propagation is improving. I found two excellent decodes from VCO, Port Caledonia, CAN on 490 kHz in the 05:30 UTC time slot. See below. On 518 kHz only a fragment from the same station was found in the 02.40 UTC time slot. This mnakes sense as the path was much improved at 05:30 UTC!

NAVTEX 490 kHz log over 1000 km mini-whip:

11680. OT: data transmission on 450 kHz

Yahoo group: navtexdx (2015)
Date: 2015-11-23 16:14:34 UTC
From: Roelof Bakker
Topic: 11680 Message: 11680

Hello all,

For some time, I have noticed what looks like a broad data transmission centred on 450 kHz. The signal is 8 - 9 kHz wide and is not transmitting continuously. Each transmission lasts 100 second!

As it is suffering from fading, I gather it is a real off air signal.

Any information about this signal will be much appreciated.

73,
Roelof Bakker
Middelburg, JO11tm
Netherlands

11681. Navtex from Lübbecke

Hi all,
Improving conditions, but no T/A here.
Baku was some time ago, and finally with a useful keyword: Cape Sangachal, some 50 km from Baku.

Regards - Dirk

Hi Roelof,
See screenshot below, I could capture one transmission. I guess this fits your description.
I let Perseus run and was not present during the transmission, no idea of the strength.
I will try to set some markers and make a log.

Regards - Dirk

Hello Dirk,

Yes, that is it.
It is much stronger later on, though.

On an other note, uploading logs does not work at the moment.
If this is still the case tomorrow, I will contact Martin.

73,
Roelof

Hi Roelof,

I have put a marker on 449KHz. Two "transmissions" can be seen, roughly
15dB above the noise.
No idea what it is, but clearly not a local event at your side.

Regards - Dirk

Hi Roelof,

I forgot this in my previous mail: I checked, and classaxe.com is
abnormally slow here.
It takes 15..20 secs to look up something. Server problem?

Regards - Dirk

From: david
Topic: 9398 Message: 11689

Hello All,

I was pleased to see the return of VCO in two slots on both channels, with better copy than I was getting from Hamburg. It was particularly pleasing to see that they still refer to themselves as 'Sydney'. It isn't just me who has trouble changing all the references, then.

Logs over 1500km

Hi all,

Same conditions like yesterday. I use the time and set up my SWL/Ham radio notebook after 5 years as it is sometimes not really reliable anymore, i.e. delete everything, install Win7, install drivers, install Perseus, YaND etc. and make a selction of what is really 'needed'. That takes some time and is boring.

73
Hans, DL4YBP

11691. Re: [navtexdx] OT: data transmission on 450 kHz

Yahoo group: navtexdx (2015)
Date: 2015-11-24 11:14:37 UTC
From: Roelof Bakker
Topic: 11680 Message: 11691

Hello Dirk,

REU/RNA/RWW is working OK again.
The logs were uploaded, however confirmation failed.
No harm done!

Marc Goldman mention on the NDB-list that this signal might be test for a new NAVTEX system. I have been thinking about as well.

What might fit in is that if I remember correct the timeslot for the new system is not 10 minutes but only 2 or 3. This agrees to some extend with my observed 100 second transmission time.

Transmissions start 2 minutes ove rthe hour and than every six minutes: XX:02, XX:08, XX:14, XX:20, XX:26, XX:32, XX:38, XX:44, XX:50, XX:56, XX:02 and so on. As said everu transmission last 1:40 minute.

There is a paper on this subject, but I fail to locate it at the moment.

I just found this:

https://blog.canpan.info/oprf_en/img/E58FA4E9878EE99BBBE6B0973.pdf

The new system is called NAVDAT.

An dthis is an ITU paper on NAVDAT:

https://www.itu.int/dms_pubrec/itu-r/rec/m/R-REC-M.2010-0-201203-I!!PDF-E.pdf

I can't find any info on current tests though.

The signal suffers heavily from fading here.

73,
Roelof Bakker

11694. Re: [navtexdx] OT: data transmission on 450 kHz

Yahoo group: navtexdx (2015)
Date: 2015-11-24 19:29:42 UTC
From: Dirk Claessens
Topic: 11680 Message: 11694

Hi Roelof,

The signal seems to be gone here now.
The observed bandwidth of ~9KHz fits the NAVDAT specification of +/-
4.5 KHz.
But why on 450 KHz, straight in NDB-land, the ITU assigned 495..505 to
NAVDAT in 2013?

Regards - Dirk

11696. Re: [navtexdx] OT: data transmission on 450 kHz

Yahoo group: navtexdx (2015)
Date: 2015-11-24 20:50:59 UTC
From: Roelof Bakker
Topic: 11680 Message: 11696

Hello Dirk,

I watched the 20:44 UTC transmission and it is still there, albeit weak.
I will try to DF it a bit with my large aperture loops.

Have you any idea what kind of transmitting protocol is used?

Regarding the choice of 450 kHz, I have no idea.
There is also a "mystery" data station around 442 kHz.
I gather this one is located west of here as it appears only after dark.

It could also be something completely different than NAVDAT!

73,
Roelof

11698. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-25 12:00:06 UTC
From: david
Topic: 9398 Message: 11698

Hello All,

Another night of improvement. At the start of the evening, my browser said the A-Index was 17. This morning it is down to 2, and the K-index is zero. I hope it lasts for a while.
Canada popped up again, although the copy was not as solid as the night before. However, several old friends decided to turn up again.
In the 2240 slot, Irekleion $03Q sent 10 messages with the B1 character, "S". I have no idea how that can happen. They got it right in the next transmission slot at 0240.

Hello Roelof,

Navdat uses OFDM (Orthogonal Frequency-Division Multiplexing) ,
implementing multiple individual QAM64/QAM16/QAM4 -modulated subchannels.
Quite complicated business!

Regards - Dirk

Hello Dirk,

Thanks for the information; I guessed so.

I asked around on the rsgb-lf-reflector, but no response so far.
I still have no clue of the location.
We need someone who can receive it at daytime to pin it down, I'm afraid!

73,
Roelof

Hi Roelof,
The French company Kenta has done trialNavdat transmissions in 2010
from "somewhere near Brest". See link below
Kenta are located in Ergu?-Gab?ric in Britanny, approx. 50 km from
Brest - but also from Corsen which I can receive here in daytime (and
you probably as well). But with low power, signal strength may enhance
at night of course.

Topic: 9398 Message: 11708

Hello All,

Nothing Special. 490kHz reception was spoilt by a couple of carriers sitting right on the centre frequency, again. That will teach me to appreciate poorer propagation in future.

More trouble at Irakleion. Messages sent on 518kHz at 2240 were in Greek and using the identifier "Q". Presumably, they were routed to the wrong transmitter.

Logs over 1500km

Hi all,

No signs of Cyprus, the Egyptian stations, Ukraine etc. But possibly a trace of T/A, see below.

73
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
(52.2962N 8.61468E - Locator JO42HH)
In Google Earth you can see my ham radio beam.
Receiver : Rohde & Schwarz & EK 071, bandwidth 600Hz, AGC fast
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4

11712. Navtex log from Antwerp,BEL 20151126

Yahoo group: navtexdx (2015)
Date: 2015-11-26 15:14:40 UTC
From: Dirk Claessens
Topic: 11712 Message: 11712

Hi all,

A tiny fragment of T/A here as well.
Roelof: your logging at 00:28 of 4Q Port Caledonia, could this have been 4O Robin Hood Bay (St.John's)?
I've checked my archive and St. John's frequently starts with "marine warnings for newfoundland"
To add to the confusion, the 00:20 slot is assigned to 4C Moisie (Sept-Iles) ??

Regards - Dirk

Hello All,

Not much to report.
518kHz seemed particularly short of decodable signals of anything that could be counted as DX.

Logs over 1500km

Session Report for David Atkins, GM8XBZ

Hi all,

and thank you Roelof for your complete log. This Canadian T/A came very unexpected for me.

As I am testing Perseus V5 alpha just a few more for me unusual logs made with my 9 year old notebook and TrueTTY 2.95

73
Hans, DL4YBP

Receiver : Rohde & Schwarz & EK 070, bandwidth 300Hz, AGC fast
Antenna : ALA 1530 SSB+ (315 <--> 115 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95

11727. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-29 08:59:05 UTC
From: Roelof Bakker
Topic: 70 Message: 11727

Hello all,

The Kyoto Dst is still jumping up and down a little, which has a major effect on propagation. Last night the K-index went up to 5 for a short time. Solar flux has dropped below 100, which is good.

The path to Port Caladonia, was only open around 06.30 UTC and weak. San Juan, Puerto Rico, was even weaker, so it was no surprise that NMR did not make it.

I found two decodes from SUH, Alexandria, EGY, with a proper header! The rest was still rubbish.

NAVTEX 490 kHz log over 1000 km mini-whip:

From: dl4ybp@...
Topic: 7241 Message: 11728

Hi all,

Novorossiysk again here and also the Egyptian stations surprisingly often.

73 and have a nice Sunday.
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
(52.2962N 8.61468E - Locator JO42HH)
In Google Earth you can see my ham radio beam.
Receiver : Perseus V5alpha, bandwdth ca. 300Hz, AGC fast
Antenna : ALA 1530 SSB+ (315 <--> 115 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4

20151128 1745 518 $03K SVK Kerkyra,GRC 1657 5 messages
20151128 1750 518 $03L SVL Limnos,GRC 1917
20151128 1824 518 $03O 9HD Malta,MLT 1924 3 msg
20151128 1951 518 $04W OXI Nuuk,GRL 3610

The reception begins with 3W LaGarde and then continues with 1X Grindavik, however without header.
YaND interprets this logically as 4W Nuuk. One of the funny surprises. Then comes Grindavik with 4
clear transmissions.

Hello all, this is my first log for over 18 months.I have moved about 1000km South to the Languedoc region of France.Nothing exciting logged in terms of DX but as yet I have no idea what my location and set-up can produce - all part of the fun!
Best wishes

11731. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-11-29 13:54:12 UTC
From: david
Topic: 9398 Message: 11731

Hello All,

The North/South path was good for me, but East/West was much weaker. I think this is the first time I have logged Novorossiysk, although I recognised the messages so I must have had partial decodes before.
Most of the night's traffic was NW Europe and Scandinavia sending storm warnings. I'm sure there was some DX under there, somewhere ;)
Unfortunately, these stations fall below the 1500km bar.

Logs over 1500km

11732. Navtex log from Antwerp,BEL 20151129

Yahoo group: navtexdx (2015)
Date: 2015-11-29 19:19:56 UTC
From: Dirk Claessens
Topic: 11732 Message: 11732

Hi all,

I could log Alexandria in 2 time slots, with quite good decoding quality.
The header format is still wrong, I had to persuade Yand that B1=N, not
A or L.
I guess commercial navtex receivers don't care and just display the
message "as received" and leave it to the user to figure out where it
came from.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]

11738. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-11-30 09:45:38 UTC
From: Roelof Bakker
Topic: 70 Message: 11738

Hello all,

Propagation is as worse as I can remember at this time of the year. The solar indices don't look too bad, however the Kyoto Dst shows a rather jumpy pattern.

I have noticed that these relatively small excursions can have a disastrous effect on propagation.

We also had a gale going on early evening accompanied by static rain, which did not help either.

NAVTEX 490 kHz log over 1000 km mini-whip:

Hello All,

A very short Log.
Power to the antenna seemed normal, so I went out to the garden to check for water in the junction boxes. Instead, I found the mast folded in half and the antenna 600mm above ground. It still recorded the Scandinavians, but they fall short of the standard. Mast is replaced, now. Here's hoping for a calm night, tonight, with good propagation.

Hi all,

I can't remember such short log of stations over 1500km.

Hello All,

A minor improvement. Canada appeared briefly on both channels. Weak on 490, but quite strong on 518. Unfortunately, Den Helder started up, and that finished the reception of Port Caledonia. The rest of the night continued to be poor. Local weather is as damp and dreary as it could get. Cloud base is at about 50m. I didn't think it was supposed to affect LF propagation.

Logs over 1500km

Hi all,

Perfect decodes from Alexandria in 2 time slots, but T/A: nada.
My local noise floor has gone down to -128 dBm the last days.
I guess the earth rods are standing with their feet in the water after
all that rain.

Regards - Dirk

Topic: 11746 Message: 11747

Hello Dirk,

The overall band noise seems to have dropped considerable. However, it is also very wet over here.

Have you checked it against the strength of a local station?
ONO-399.5 is 4 dB weaker due to the wet surroundings!

73,
Roelof

Hi Roelof,

It could be coincidental of course, the thunderstorm season is over as well.
And what will the Christmas season bring this year?
Will there be new and exciting "must-have" flashing/running/walking
lighting contraptions, fed from cheap switched power supplies? :-)
I will try your idea of checking a local station.

From: dl4ybp@...
Topic: 7241 Message: 11749

Hi all,

Many spoiled messages mean a great challenge for YaND. A very large number of messages from Oostend. In general I have the feeling that the mini whip was superior last night.

T/A on the mediumave band was quite interesting last night. My Perseus recording shows a number of
stations in the upper part of the band. Some even with audible modulation. Stations in the lower
part did not make it, however. This, I think, is reflected in my Navtex logs.

11752. Navtex log from Antwerp,BEL 20151202

Yahoo group: navtexdx (2015)
Date: 2015-12-02 20:39:38 UTC
From: Dirk Claessens
Topic: 11752 Message: 11752

Hi all,

Indeed, Canadian transmissions first jumped over David's head, and then made a side step to Holland to avoid a landing in Belgium :0)
On another note, something went wrong during the 16:00 transmission of Corsen.
After the last message, the system kept erratically sending what sounded like the "end of transmission" signal.
Around 16:30 when I stopped monitoring, it was still doing this.
The 20:00 transmission was normal though.

Topic: 11756 Message: 11758

Hi Frans,

Your UNID seems to be a retransmission of an Ismailia message I logged earlier on oct 30 around the same time.

Regards - Dirk

Dirk,

You have a well working memory, wow.

Cheers,

Frans

Hello all,
Last night's 518 Khz log.
This logging below brought a brief moment's excitement, but alas it's just a YaND keyword false-positive! I don't think Kelibia is operating anyway.

Hi Dryden,

Malta is currently carrying the broadcasts for Tunisia in that slot.

Emacs!

Alan.

Hello Dryden,

My Yand identifies Malta correctly because of the unique identifier
MALTARADIO, which takes precedence over the T identifier.
Check that MALTARADIO, MALTA RADIO and MLTRADIO are present in the UID list.
(This will of course not work if the UID was received in error)

Regards - Dirk

11767. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-04 09:30:08 UTC
From: Roelof Bakker
Topic: 70 Message: 11767
Attachments: 2 described; binary payloads are missing from this source WARC

Hello all,

Solar flux has drooped below 100 and the K-index is now below 3,
which indicates a possibility for good propagation.
I found that even more important is that the magnetic field is
stable and even the smalles change can have effect. The Kiel
magnetometer looks like this today:

As you can the graph is almost a straight line.

For once the effect on DX propagation is imminent!
See the 518 kHz log below.

NAVTEX 490 kHz log over 1000 km mini-whip:

```

11768. Navtex log from Antwerp, BEL 20151204

Yahoo group: navtexdx (2015)
Date: 2015-12-04 09:34:21 UTC
From: Dirk Claessens
Topic: 11768 Message: 11768

Hi all,

Halleluja, T/A is back!
Previous log of Miami dates back to February 2015.
Time will tell whether this is the turning point...

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]

Hello All,

Reception was much better than the A index suggested. The Eastern Mediterranean remains hidden from here.

Logs over 1500km

11770. Re: [navtexdx] HF Navtex Logs from Brier, WA

Yahoo group: navtexdx (2015)
Date: 2015-12-04 10:43:37 UTC
From: Roelof Bakker
Topic: 11755 Message: 11770

Hello Tom et all,

Your log entry:

2015-11-25 11:03 6314 $13B UFZ Vladivostok, RSE (NEW)

is a new country for RWW on 6314 kHz.

I have found information on an international callsign list and the location mentioned is N43 07 00, E155 55 00.

However the call sign given is UIK.
Was the call UFZ included in the message?

Does anyone have better information on HF NAVTEX?

73,
Roelof Bakker

Hi Dirk, Yes my YaND also has the UID's you list. Is it possible the 'T' ID and the word Tunisia (which I have as a GID for 3VL) have taken preference for some reason? Dryden

Hello Dirk,

Thank you! UFZ it is.
One more riddle the log shows $13B as ID.
Is this correct and where can I find the information?

73,
Roelof

Hi Roelof,

UFZ it is? Hold your horses...

_MF/518_
REU lists UFZ Vladivostok on 518 and HF as 13A *and* 13B. (I searched for $13, without a letter)
I think this is an error, 13B should be Kholmsk, but as REU does not store the raw logs, it will be impossible to tell which was which.
If you enable area 13 in Yand, both stations will show up as *UIK* Vladivostok and *UFO* Kholmsk.
(Yand's station table was compiled from Alan's database which has proven to be correct over the years)

With the help of a remote Perseus in Japan, I logged 13A Vladivostok and 13B Kholmsk a few years ago on 518. As you can see below, both messages show the line COASTAL WARNING VLADIVOSTOK, and were received in the correct time slot. I guess that the mentioning of Vladivostok is to indicate the responsible central authority, not the transmitter (see Valencia/Cabo de la Nao recently)

_HF_
Formally, Navtex on HF is not Navtex but HF NBDP. There is no 4-hour schedule, ZCZC b1b2/NNNN formatting is not required. Only USCG stations consequently use identical Navtex-style b1 identifiers on both MF and HF. See 3d message below for a transmission of UFZ Vladivostok I logged on HF.

I guess that - except for USCG stations - one cannot assign Navtex-style b1 characters for HF.
See also Bill Hepburn's HF GMDSS site:
<http://www.dxinfocentre.com/maritimesafetyinfo.htm>

This is another "what's in a name" game but worse: what's in a call?

Regards - Dirk

From: Dirk Claessens
Topic: 1670 Message: 11778

Hi Dryden,

The processing order is alway the same, regardless of message content.
In the first pass, Yand will seek for unique identifiers; in your log
this was MALTA RADIO (note the space, which is why I asked for
confirmation of your UID entries)
Only if no UIDs were found, a second pass will be done with the B1
identifier (if present, and in the range 'A'..'Y'), and GIDs.

Raw Log: 2015-12-02 19:10:26> ZCZC TA10
2015-12-02 19:10:28> MALTA [RADIO]
2015-12-02 19:10:32> [TUNISIA|TUNISIE] NTM ~RIJ~WWXWPQT

To check that Yand has used a UID, you can do the following:
-go to the log tab and locate the Malta message
-click in the Navarea field, type a zero and press up or down arrow to
confirm.
If yand used a UID to re-identify , the Navarea field should return to 3.
(An identification based on a UID cannot be overridden by the user, one
based on a GID can.)

If the above does not work, i.e. if Kelibia shows up again, post the
relevant part of Yand's system log here so I can investigate.

Regards - Dirk

Hello Dirk,

I found UIK documented as well.
Anyhow, REU has been changed now accordingly.

Good DX!

Roelof

From: denno9@...
Topic: 1670 Message: 11780

Hi Dirk, The test you suggested returned the Navarea field to 3, so the UID seems to have been used correctly by YaND. The system log for that period unfortunately has gone, cleared when I had to reboot the pc in the meantime. I think this is one we may have to file away for future reference. I found it a useful and interesting insight into YaND in any case!
Best wishes
Dryden

11784. Navtex logs from Whitley Bay, ENG

Yahoo group: navtexdx (2015)
Date: 2015-12-05 13:09:21 UTC
From: Mike Thayne
Topic: 6159 Message: 11784

Hello All,
Severe local interferance again but the directional loop completely eliminates it. No T/A but good
messages from Egypt compensates.

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb
Receiver : Icom 735
Computer : Dual CPU 2.2Ghz
External soundcard Behringer UCA202
Decoder : YaND 6_4
Antenna : Wellbrook ALA100LN with 10m circum wire loop

11785. Navtex log from Antwerp,BEL 20151205

Yahoo group: navtexdx (2015)
Date: 2015-12-05 15:12:53 UTC
From: Dirk Claessens
Topic: 11785 Message: 11785
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

T/A was weaker than yesterday.
And yes, Roelof: the Kiel magnetometer shows the disturbances a lot more detailed!
Thanks for the tip.

Regards - Dirk

11795. Bodoe Radio

Yahoo group: navtexdx (2015)
Date: 2015-12-07 01:58:57 UTC
From: Vernon
Topic: 11795 Message: 11795

Did anyone copy Bodoe Radio $01B @ 0101UTC...if so did it contain any of the following? What I have is certainly not enough to confirm...just interested as I have never copied it on 518khz.

Thanks...

Vernon

Hi Vernon,
This is a UK station: England East coast, the Wash, 53E-0.26E.
The B identifier was likely received in error.

Regards- Dirk

Dirk [mobile]

From: PalmerRD@...
Topic: 11802 Message: 11802

Foristell, Missouri
I can't ever remember when I have had three different stations from
Chile in one listening session.
Conditions to Canada were poor with only 04U being noted. Poor conditions
to the west coast
also prevailed with 12C the only station recorded.

2015-12-07 0418 518 $15B Valparaiso, Chile
2015-12-07 0422 518 $15C Talcahuano, Chile

11803. Navtex from Antwerp,BEL 20151207

Yahoo group: navtexdx (2015)
Date: 2015-12-07 15:29:13 UTC
From: Dirk Claessens
Topic: 11803 Message: 11803

Hi all,

A short outbreak of presumably Boston was noted.
The ZCZC FE1 header surely was from Antalya Turk Radio, then at 00:55
Boston took over (or Antalya stopped transmissions)
Anyone got more?

Regards - Dirk

Hello Vern,

Thanks for the Boston confirmation!
Regarding your Argentina log:

The time of reception fits with the 06:50 06R Buenos Aires schedule (see
Bill Hepburns website)
On Bill's website La Paloma, URG is listed as well, but Alan Gale's
database lists La Paloma as inactive.
This is confirmed by the IHO Navtex board NAVAREA VI self-assessment
report I found here: <*http://tinyurl.com/holudza>*

Uruguay La Paloma [F]
Tel :(598-2) 309 3775 / 3861
Fax : (598-2) 307 1777
0050-0450-0850-1250?1650?2050
Temporarily off air
34?40?S 054?09? W
280

Congratulations with your first!

Regards - Dirk

As posted earlier I had two decodes for the R ID in the 0650 slot last night. After discussions with Dirk and looking at other available information it was agreed that it was in fact $06R in Buenos Aires Argentina relaying for La Paloma, Uruguay which is currently off air. Dirk thanks for your help on this.

Vernon

Hello Maurizio,

20151206 0011 518 $19A LGS Svalbard,SVB 3688

It is rare to find Svalbard outside the asigned time slot of 00:00 - 00:10 UTC.
At 00:10 UTC Bodo starts transmitting.

Are you sure when you look at your raw log that this is indeed Svalbard?

The reason I ask this is that lately I have had incorrect flagged Svalbard logs that on closer inspection
appeared to be from Bodo. The header was corrupted as it originated from $03A, UDN Novorossiysk,RUS.

73,
Roelof

11815. Re: [navtexdx] Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-12-08 15:40:17 UTC
From: Dirk Claessens
Topic: 5417 Message: 11815

Hi Maurizio & Roelof,

Norwegian weather bulletins are problematic to identify when the header was not received.
They are often almost identical except for the ID-letter, and cover a very wide area, up to the polar region.
It is not uncommon to see areas near Svalbard being mentioned in Bodo and Vardo messages: Yermak plateau, banks of Svalbard, etc..
See examples below (last one is a genuine Svalbard message from 2012, starting at 00:00 and wiped out by Corsen 2 minutes later)

I'm pretty sure Maurizio's Yand was confused when it received the A header from Novorossyisk, and then detected a keyword of 19A Svalbard (and none for Novorossyisk) . The same has happened before with headers from 2A Corsen.

Regards - Dirk

From: Roelof Bakker
Topic: 5417 Message: 11816

Hello Maurizio,

I won't spoil the fun, but in the 00:10 UTC timeslot, Bodo transmits an extended weather forecast. It often mentions the Svalbard area. See this message from Bodo that I logged on december 5:

20151205 0014 518 $19B LGP Bodo,NOR 1839
2015-12-05 00:14:10> ZCZC BE24

Thank you Roelof & Dirk.

almost certainly is Bodo.

73, Maurizio IW2GOB

11818. Re: [navtexdx] Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-12-08 20:18:53 UTC
From: Roelof Bakker
Topic: 5417 Message: 11818

Hello Maurizio,

Svalbard on NAVTEX is rare here (NDB's from Svalbard are even rarer!) and so far I have not seen it this winter season.

Every time I see it flagged in the log cheers me up, just to discover that it was a false alert!

Anyway, in due course propagation will improve, if not this year, it will be next year or the year after next year!

73,
Roelof Bakker

Well all Greenland stations accounted for so the miskeying station was
to the south.

Over 2000km

ICOM - R75 with YaND
500' elevated wire and 900' BOG

From: david
Topic: 9398 Message: 11822

Hello All,
No 490kHz log today, due to Operator Error. {For those who might like to learn from my lesson, I 'knocked' something at around 1700 on Tuesday and the receiver was pumping out audio centred on 1300Hz, while YaND listened patiently at around 2400Hz. I discovered this at midday, today. I have added this to my daily list of settings to check, but too late for this session.}

Otherwise, it was just an ordinary night.

Logs over 1500km

Hi all,

Slightly improving conditions, Kp slowly recovering, but new disturbances are predicted...

Regards - Dirk

From: david
Topic: 11824 Message: 11831

Hi Dryden,

I hope you are enjoying your new home, and thanks for posting to the list, once more.

Can you check your distances? I thought the ranges of the Spanish stations were strange, but I am really bad at geography. So I put your locator into my spreadsheet. I get very different distances to yours. For example:

Stn your km My calc
03X 1418 595
02D 1302 1021
03Q 1245 1060
03R 1166 560
02R 1744 1173
03U 1042 791

And so on. I think your DGPS logs have more accurate ranges. Have you got an old locator in you Navtex logbook?

Best Wishes
David, GM8XBZ

Hi David & Dryden,

Dryden's distances and mine are exactly equal :0)
Yand uses my coordinates as a default after a fresh install.

Regards - Dirk

Topic: 11824 Message: 11833

Hi David and Dirk, Whoops, yes wrong coordinates. I have two versions of YaND on this PC having just installed the second one, and missed changing the coords. That's what I get for doing things late at night! My correct coordinates are Long 43.533794 Lat 3.332848 and YaND has been updated. Well spotted David and thanks for flagging it!
Best wishes
Dryden F4VRG

11835. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-11 10:14:08 UTC
From: Roelof Bakker
Topic: 70 Message: 11835

Hello all,

Not a single shred from over the pond was found and looking at my T/A monitoring NDB catches, this picture was confirmed. I found a very weak trace of NDB DDP-391, San Juan, PTR, way below aural copy.

There appeared to be a short and weak opening to Nunavut towards sunrise. We can only hope for better conditions, however the sun appears to be rather restless at the moment.

NAVTEX 490 kHz log over 1000 km mini-whip:

Hello All,

Usual stuff.
National weather forecast said we might get to view the Geminiid meteor shower. Around here, it will only happen if we can fly above a lot of dense storm-cloud.

Logs over 1500km

Hi Dirk,
Another "Kelibia" decode last night. I have shown the system log below. YaND seems to have done everything right. If the transmission is made during the Kelibia time-slot, and there is no UID of Malta Radio in any form, am I right to think YaND would identify the message as from Kelibia 3VL, even if it's not? For a mariner
of course it makes no difference. As far as I can see, the sea-area covered by Malta Radio is not too different to that if 3VL was operating.
Best wishes
Dryden F4VRG

From: Dirk Claessens
Topic: 1670 Message: 11838

Hi Dryden,

Yand never uses or checks the actual time slot a message was received in.
But the actual B1-character you received was T for Kelibia! (Yand will
/never/ change this)
Malta Radio must be doing this: at first (because their own O-slot was
fully occupied) they have started to use Kelibia's time slot with their
O-identifier, and now they are using the ID-letter for Kelibia as well.
The riddle is solved.

This is in fact a highly unconvential way of doing things.
In all other cases I know of where one station wass assisting another,
a line was added like "XXXX RADIO ON BEHALF OF YYYY RADIO",
or "XXXX relaying for YYYY", but always with the header of the
/assisting/ station.

There is nothing I can do about this, to poor Yand this*is* a Kelibia
message :0)
(For messages identified with a GID, you can enforce Malta by changing
the T to O)
Let's hope Malta's next step will not be to add KELIBIA RADIO to each
message...

Regards - Dirk

From: denno9@...
Topic: 1670 Message: 11839

Hi Dirk, many thanks for your response. Strictly speaking I guess it's the incorrect ID of a transmitting station, causing all NAVTEX receivers out there to come up with the same result. But that's for the ITU to worry about! Best wishes

11843. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-12 11:27:05 UTC
From: david
Topic: 9398 Message: 11843

Hello All,

There was a distinct pattern to reception in this session. The Scandinavians were particularly strong signals, but the Eastern Mediterranean stations were absent. There were a couple of clear messages from VCO, but nothing else. Large numbers of semi-local signals were garbled.

Logs over 1500km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

Hi all,

Propagation last night somewhat recovered.
'Kelibia' (Malta) received here as well.

11848. Navtex log from Antwerp, BEL 20151212

Yahoo group: navtexdx (2015)
Date: 2015-12-12 19:21:14 UTC
From: Dirk Claessens
Topic: 11848 Message: 11848

Hi all,

No trace of T/A here, but Egypt came through loud & clear again.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]

Hello All,

A tantalising session. Bodo and Vardo started to give decodes very early, and continued until the end of the session. But that was the best of it. Just the one T/A decode, and nothing further East than Greece.

Logs over 1500km

Session Report for David Atkins, GM8XBZ

Hi all,

Stable signals from the Greek islands throughout the night. Northing from Cyprus, Egypt and Israel however. Nothing from the Norwegian north either.

73

From: denno9@...
Topic: 11857 Message: 11859

Hi Frans, regarding Kelibia, the current belief is that it is Malta Radio that is providing the NAVTEX service on behalf of 3VL in the latter's time slot.Unfortunately there is no identification of Malta Radio in these messages, so with the data available YaND thinks it is decoding Kelibia. Earlier recent thread on this subject here:
https://groups.yahoo.com/neo/groups/navtexdx/conversations/messages/11838

Dryden,

I missed that conversation; I was in North Carolina. Your assumptions are confirmed in this doucment:

http://www.iho.int/mtg_docs/com_wg/CPRNW/WWNWS7/WWNWS7-3-3-1b-NAVTEX%20Report-Malta.pdf

11862. Canadian survey

Yahoo group: navtexdx (2015)
Date: 2015-12-14 18:30:10 UTC
From: Roelof Bakker
Topic: 11862 Message: 11862

Hello all,

For monitoring T/A propagation, I am running a Linrad overnight recording. Each day, I check propagation from QY-263, Sydney, CAN NS, 4554 km, LT-305, Alert, CAN NU, 4014 km (what else!)and DDP-391, San Juan, PTR, 7042 km.

The path to DDP-391 is very weak at the moment and aural copy is marginal at best or not possible at all.

Looking this morning at my Linrad fast playback graph for QY-263, I notid that just 1 Hz up an other station could be spotted. This is YBB-263, Pelly Bay, CAN NU, 4950 km. YBB-263 is not found very often and it only happens when progation from the north is good. This appeared to be the case for sure, as 11 stations from Nunavut could be logged today.

I have often noted before that signals from Nunavut can be received with excellent signals, whilst propagation from Canadian NDB's at lower latitudes is mediocre.

11863. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-14 20:23:50 UTC
From: Roelof Bakker
Topic: 70 Message: 11863

Hello all,

Excellent propagation from northern Canada and just so, so for the rest of the T/A path. Puerto Rico was particular poor.

This does not help for NAVTEX reception, however I found two decodes from Upernarvik/Disko Island, which does not happen too often.

NAVTEX 490 kHz log over 1000 km:

```
20151213 1640 490 $03E IQM Mondolfo,ITA 1114
20151213 1728 490 $03I ICH La Maddalena,ITA 1228

Hello Roelof,

Indeed, propagation from the north was excellent the last days.
But just to give an idea of what receiver location can do, below is
what I caught at that time from Upernavik.

Regards - Dirk

11865. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-14 20:58:25 UTC
From: Roelof Bakker
Topic: 70 Message: 11865

Hello Dirk,

Yes, location does matter and I don't complain!

Northern propagation is often enhanced at this time of the year
irrespective of the phase of the eleven year solar cycle, it seems.

Reception from inland Canada is very poor indeed at the moment.
Solar flux (122) is way to high for decent DX reception.
When it drops below 100 things will become more interesting!

73,
Roelof

11869. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-15 10:41:17 UTC
From: david
Topic: 9398 Message: 11869

Hello All,

A very small number of logs. As others have noted, propagation from the North continues to be very good. Not like everywhere else.

Logs over 1500km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Dec 15, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

Hi all,

Rather meagre. Can't tell that something unusual from the north reached me.

73

Hi all,

Rather uninspiring.

73
Hans, DL4YBP

Hello All,

A small improvement in conditions, but still welcome. The Eastern Mediterranean remains out of range. Even Greece has not returned to the log, yet.

Logs over 1500km

11883. LOGS REU : NAVTEX from L2C, BUENOS AIRES, ARG on 4210 kHz

Yahoo group: navtexdx (2015)
Date: 2015-12-18 05:44:04 UTC
From: Joachim Rabe
Topic: 11883 Message: 11883
Attachments: 1 described; binary payloads are missing from this source WARC

Hi list,

I’ve had the EKD-500 tuned to 4210 kHz for quite a while to watch for transmissions from L2C from Argentina.

I have logged fragments before on this frequency but early this morning I finally found a non-ambiguous log from L2C.

Date UTC QRG ID Station ITU

20151218 0031 4210 L2C, BUENOS AIRES, ARG

I have added the full log as a pdf-file.

Subject: [navtexdx] LOGS REU : NAVTEX from L2C, BUENOS AIRES, ARG on 4210 kHz [1 Attachment]

Hi list,

I’ve had the EKD-500 tuned to 4210 kHz for quite a while to watch for transmissions from L2C from Argentina.

I have logged fragments before on this frequency but early this morning I finally found a non-ambiguous log from L2C.

Date UTC QRG ID Station ITU

20151218 0031 4210 L2C, BUENOS AIRES, ARG

I have added the full log as a pdf-file.

11890. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-18 15:48:55 UTC
From: david
Topic: 9398 Message: 11890

Hello All,

A pair of logs cruelly cut short.
It turned out that a 'Waterproof Junction Box' at the end of the garden had enough water in it to trip the supply. From some time before midnight, the miniwhip was without power. I still got a full complement of European and Scandinavian transmissions from the powerless MiniWhip, but the early indications had been for an improved DX session.
All reinstated now. Please send me some nice propagation indices for the next session.

Logs over 1500km

11894. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)
Date: 2015-12-19 10:31:35 UTC
From: Maurizio
Topic: 5417 Message: 11894

Hello all,

these days I have been very busy , but here the conditions were not spectacular .
Starting next week I will be ' active also from the south of Sardinia with Afedri AFE822x , Roelof PA0RDT mini -whip and LZ1AQ loop .
We hope for better conditions.

I wish you all Merry Christmas and Happy New Year !

My last night logs:

From: david
Topic: 9398 Message: 11895

Hello All,

Normal Service is restored!

There was only the one decode from VCO, but I was pleased to see messages from Haifa and Ismailia for the first time in several days. I note the propagation predictions are not good, but I'm hoping for a couple more decent sessions before we sink too low.

Logs over 1500km

Session Report for David Atkins, GM8XBZ

Hello Dirk,

Lately I noticed from time to time very broad transmissions from
Oostende:

I wonder if you have seen this as well.

73,
Roelof

11898. Re: [navtexdx] NAVTEX Belgium

Hello Roelof,

Wow, they are almost running into 530 KHz!
I just checked their 19:10 transmission and all seems normal, see screenshot.
The spectrum width is slightly wider than Pinneberg, but it is a lot stronger as well.

Maybe a temporary problem?

Regards - Dirk

Topic: 11897 Message: 11899

Hello Dirk,

Yes, it seems to be intermittent.
I will run a fast Linrad playback tomorrow.
If it happens again, it will be very obvious!.

Just noted that the Kyoto Dst took a sharp rise up.
It certainly will be plummeting down before long.

Anyway, poor conditions are not bad for the progress of my various
projects!

73,
Roelof

Hi all,

Guess I could go asleep until the number of sunspots has considerably fallen
or I just do some PSK31 QSOs on the higher ham bands.

73 and Seasons Greetings to all of you if I don't find the time for Navtex in the coming days
Hans, DL4YBP

QTH : Lübbecke, Northwest Germany
(52.2962N 8.61468E - Locator JO42HH)
In Google Earth you can see my ham radio beam.
Receiver : Rohde & Schwarz & EK 071, bandwidth 600Hz, AGC fast
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2

Topic: 9398 Message: 11904

Hello All,

An unusual session, with a lot of signals from stations I rarely see, even though they are often reported by others.
There was a considerable string of messages from VCO, as well as most of the Mediterranean stations. The North was strongly represented, but I received the following warning of Ice Accretion on 518kHz that I can't identify:-

Hi David,

Looks like a garbled Grindavik message.

Regards - Dirk

11906. Navtex log from Antwerp,BEL 20151220

Yahoo group: navtexdx (2015)
Date: 2015-12-20 15:32:14 UTC
From: Dirk Claessens
Topic: 11906 Message: 11906
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all,

No T/A here, but splendid propagation from Egypt again.

Roelof: Back in 2012 Corsen had a similar problem with its spectrum.
As you can clearly see on the screenshot, there were 3 signal peaks,
making the total spectrum about 2KHz wide
I distinctly remember all 3 of them could be perfectly decoded!

I'm guessing this could be a problem with an output/harmonics filter (or
the absence thereof) in the transmitter?

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225

11907. RE: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-20 15:43:11 UTC
From: david
Topic: 9398 Message: 11907

Hello Dirk,

Thank you. It was certainly the right timeslot, but I don't often see the 'accretion' messages.

It is an interesting form of garbling, as if the software is picking up both of the interleaved character transmissions, but is unable to separate them. I see it particularly in transmissions from higher latitudes.
Kind Regards
David

Hi David,

Looks like a garbled Grindavik message.

Regards - Dirk

11908. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-20 16:26:09 UTC
From: Roelof Bakker
Topic: 70 Message: 11908

Hello all,

Considering the solar indices, I won't complain.
However, the Kyoto Dst has dropped to -80, recovered a little to -60
and continued a steep downward slope again: now -97.
This will last a while!

11909. Re: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-20 19:29:36 UTC
From: Dirk Claessens
Topic: 9398 Message: 11909

Hi Dave,

Yes, this phenomenon has a chance to occur in 2 situations.

-1/ When 2 stations are "fighting": Yand finds a sync point for station A, starts decoding A and then B slowly pushes away A because of changing propagation. As you suspected, the DX/RX interleave process is then disturbed, typically resulting in long vaguely readable words.

-2/ When a strong station ends its transmission without emitting the special "end of transmission" character sequence. (this is not mandatory, not all stations do it)
When this special sequence is received, Yand will force a resync and start over with a clean slate.
But when it is not received and a previously underlying weaker station pops up, the same as explained above may happen.

The real problem in this situation is that almost no errors ('~') occur, so the normal error detection/resync mechanism isn't triggered. Bitwise, Yand sits on the correct word boundaries, but on the wrong word.

Regards - Dirk

11912. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-21 10:50:04 UTC
From: Roelof Bakker
Topic: 70 Message: 11912

Hello all,

Despite the geomagnetic storm, propagation was found to be interesting. Bodo, Vardo, Bjuroclubb and Archangelsk were absent and propagation from Canada has collapsed completely.

However, NMR, San Juan, Puerto Rico, produced a decent decode.

11913. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-21 14:30:09 UTC
From: david
Topic: 9398 Message: 11913

Hello All,

LF amateur operators were reporting Auroral conditions last night, but we saw nothing through the cloud and rain. The propagation was noticeably different, though. Like Roelof, I had nothing from Bodo or Vardo (or Canada), but I decoded a lot of signals from Egypt and Israel which made the session an unusual one for me.

Thanks to Dirk for another insight into the workings of YaND. We really ought to assemble all these helpful hints into a technical supplement.

Logs over 1500km

Session Report for David Atkins, GM8XBZ

Hello all,

I just got this message, a request from the vessel /CSC Mississippi Voyage/r via the webmail form at my web page at www.navtex.net.
This is a question maybe somebody in this list can answer.

I will forward the answer I eventually get from you to Mississippi Voyager.

Thanks.

Regards
Geir, LA6LU

From: CSC Mississippi Voyager
To: la6lu@...

Hello,

We are experiencing technical difficulties with our receiving of NavTex messages, particularly the NAV warnings.

We are set to are XII, our requested districts are for pt. Reyes, Cambria, and Astoria. And it?s in manual mode.

We get meteorological warnings, though the beginning of the text reads Norfolk, VA, the rest is related to California waters.

The Nav Warnings are totally off however, they come in labeled correctly, but the body is always from some US east coast district, they look like NAVAREA IV warnings.

We get only a couple for our areas and very rarely, we are missing all of our Nav Warnings. I contacted the device technical support, went thru all the settings and found new issues. We then called in technical support to the vessel. They found no problems and ordered and installed a new antenna and NavTex unit.

Still the same problem.

Do you have any clue as to what our problem may be. So far we have gotten no information at all leading to a possible solution or reason for this problem.

Thanks

Chad

Hi again,

FYI, since I am also one of the shore based stations delivering AIS data
24/7 to marinetraffic.com, I have a full data account there.
So I did a lookup for CSC Mississippi Voyager. It's always nice to see
where such requests as that (in my previous post) are originating from.

Hi Geir,

Sounds like it may be as a result of the changes to the US service, which were supposed to come into effect on September 15th. It may well be that their equipment is looking for the former names, though I'm sure that some of our US members will be able to confirm what is showing on their messages now in that area. You'd think that the makers of the NAVTEX receivers would have updated their firmware or lists to reflect any changes though.

I've re-pasted the notice about this below in case they haven't seen it:

Alan.

R 181237Z AUG 15
FM COMDT COGARD WASHINGTON DC//CG-6//
TO ALCOAST
ALCOAST 331/15
COMDTNOTE 2000
SUBJ: COMMUNICATION AREA MASTER STATIONS (CAMS) CONSOLIDATION
A. Telecommunication Manual, COMDTINST M2000.3 (series)
B. Telecommunication Tactics, Techniques, and Procedures (TTP)
CGTTP 6-01.2 (seires)

1. The Coast Guard will consolidate the Atlantic and Pacific Communication Area Master Stations (CAMS) to create a single Communications Command (COMMCOM). COMMCOM will operate the Coast Guard's long range communications system and contingency communications assets, assist with operational planning, expand existing training in tactical communications operations, and interface with other government agencies. COMMCOM will be responsible for Coast Guard communications interoperability

and National Incident Command communication requirements.

2. Background. COMMCOM will be established on 09 Sep 2015 under the operational
and administrative control of COMLANTAREA.

3. Impact. The following units will be disestablished as a result of this project:
A. CAMSLANT
B. CAMSPAC
C. COMMSTA BOSTON
D. COMMSTA MIAMI
E. COMMSTA NEW ORLEANS
F. COMMSTA HONOLULU
G. COMMSTA KODIAK

4. With the exception of Kodiak, these units will be unmanned and their radio systems operated remotely by the COMMCOM. A COMMCOM detachment, COMMDET Kodiak, will remain at the former COMMSTA Kodiak facility to provide radio services for the Alaska region. An additional COMMCOM detachment, Mobile Contingency Communications (MCC) West will be established in Novato, CA, to provide contingency communications response and communications assist team (CAT) services for PACAREA units. ESD Novato will be established to provide continued electronics support to the former CAMSPAC facilities. Facilities engineering, grounds and electronics maintenance, along with other remaining support responsibilities will shift to regional bases along with resources to provide this support. This consolidation reduces billets required to operate and maintain the CG long range communication system from 418 to 208 and saves over $10.5 million annually. These organizational changes not only achieve significant budgetary savings but also align the mission and support with a modernized CG. The Operating Facility Change Order (OFCO) directing these changes was provided via SEPCOR.

5. The present system of CAMS and COMMSTAs was established in the 1970s to provide HF communications for CG command and control (C2) and maritime public safety. With the move to satellite based communications, the need for HF communications, particularly for C2, has dramatically declined, making it possible to reduce and consolidate resources while still meeting all mission requirements. This change also addresses growing CAMS missions, contingency communications and communications assistance, by reallocating billets to supplement current staffing. Mariners will not experience any degradation or change in the services the CG communication system now provides nor will the changes negatively impact how they communicate with the CG to obtain emergency assistance. The CG will continue to provide high seas weather broadcasts, monitor HF distress and safety radio systems, and provide C2 communications for CG units.

6. Assessment of impact on operational communications policy and TTP is ongoing and will be addressed via changes to references A and B.

7. Public Affairs Guidance: COMMCOM, COMMSTAs, CAMSLANT, and CAMSPAC are authorized to engage the media and public on how this initiative affects their unit. Unit personnel should contact their servicing Public Affairs Office for support and specific guidance. Questions regarding the policy itself or the ultimate decision to consolidate the communications system should be directed to the appropriate District, Area, or Headquarters public affairs office.

8. My point of contact for this project is Mr. Freddy Montoya, COMDT (CG-652), (757)686-4035, Freddy.L.Montoya(at)uscg.mil

9. RADM Marshall B. Lytle, Assistant Commandant for Command, Control, Communications, Computers & IT, sends.

10. Internet release is authorized.

Hi Geir,

Part of what the ship is seeing is correct. The US Coast Guard is "remoting" (eliminating manning/staff) everything, Navtex, DSC....., so everything will probably look like it is coming from VA (Portsmouth, Virginia). I would also think that the ship would want 12O (Honolulu) as well as that is the direction most of the wx comes from on the left coast of the USA. But I am just a landlubber! LoL

As far as the Nav warnings I don't know. I won't be able to rx anything here on 518 until 2240Z but Perseus & YaND are waiting.

More Live Radio Fun and a Whole Lot More!

Hello Alan,

Thanks a lot. I suspected something like this...or more correctly that one ore more navtex station do not tx in their (known) allocated time slot anylonger. I think what you just sent may explain this well.

I have already sent him the answer below. I will wait a day or so before I send more to him in case some of the US members want to share something they know about this too.

Hello Chad,

Thank you for your mail.

I do not have the answer on this, but I have sent some requests around to see if I can find out something about this.
I know the navtex stations sometimes screws up their id's and sometimes broadcasts using the wrong time slots allocated to them, so it might be the case here.

I will let you know if I get some answers on my requests.

Hello Don,

Thanks a lot to you too. It seems to me that this change which probably is based on saving money (as always), -is not good since it confuses even big tankers like this. It can even be dangerous I would say.

Regards
Geir, LA6LU

From: Don
Topic: 11915 Message: 11921

Hello Geir,

That is pretty much the size of it. I guess I will have to wait until
after dark for transmissions - still about a half hour 'til sunset here.
There may be no Nav warnings at the moment.

More Live Radio Fun and a Whole Lot More!

Date: 2015-12-22 00:10:05 UTC
From: la6lu@online.no
Topic: 11915 Message: 11922

Thanks Don. I just forwarded your and Alan's messages uncut and unedited to the ship. I also wrote this:

Hello Chad,

I hope this can help you understanding what probably is happening regarding your navtex problems. What I wrote previously seems valid, but I'm afraid on a permanent basis.

I have already gotten two feedbacks on this, so please check them both out (below).

I think the only thing you can do at this time, is to make sure the firmware in your navtex receiver(s) are updated. They probably are updated since you already have had tech people on your ship. But please also check that the manufacturer(s) really has this rather important change incorporated in their latest firmware. They might not have done that yet.

I guess I will get more feedbacks on this tomorrow and will be pleased to forward to you anything I get on this.
I wish you and the crew all the best a Happy Christmas

Best regards
Geir Laastad
www.navtex.net

Regards
Geir, La6LU

11923. NAXTEX 518 FROM TUSCANY COAST ITALY

Yahoo group: navtexdx (2015)
Date: 2015-12-22 06:24:41 UTC
From: gxb11506@...
Topic: 11923 Message: 11923

Dear all, I test since long time the reception on 518 and it seems to me this is a good period,
Here the log abtained with an ATS909 and Raloef's Miniwhip
regards
Giuliano Bertozzi

Hi all,

Absence is the magical word for this log. Nothing from the Norwegian north,
from Turkey, almost nothing from Greece, nothing from Italy and spain.

11926. Re: [navtexdx] Forward: NavTex messages (from CSC Mississippi Voyager)

Yahoo group: navtexdx (2015)
Date: 2015-12-22 10:20:00 UTC
From: Dirk Claessens
Topic: 11915 Message: 11926

Hello Geir & all,

I wasn't home yesterday so I'm jumping in late...
I'm pretty sure the cause for the confusion were misrouted messages,
i.e. messages destined for the East coast were routed to one or more
West coast stations (or the other way around)
See example below, just one of the many in my archives: received from 4A
Miami but clearly destined for 12O Honolulu.

Since the headers are correct, there's not much that can be done to
avoid reception.
There's a saying here in the Navtex group regarding USCG loggings: "If
you didn't catch the header, you can't be sure where it came from"

Regards - Dirk

Hello Dirk,

Thank you so much. I have already forwarded your feedback to Mississippi Voyager.
But I have not yet heard anything back from them after the initial mail I got from them.
Will forward eventual replies from them here if I get some.

Regards
Geir, LA6LU

Hi all,
Logs over 1500 km.
Alexandria keeps sending these bogus headers, I wonder if they monitor their own transmissions?

Regards - Dirk

From: david
Topic: 9398 Message: 11930

Hello All,

Slim pickings, indeed. The A-Index was 66 when I looked in the late evening.
No wonder decodes are hard to find.
Positive side - it MUST get better ;)

Hello all,

Dirk, I believe that the lack of DX reception is not only due to poor propagation. Last night saw a excellent opening to Puerto Rico around 03:00 UTC:

This is during the (extended) timeslot of NAVTEX station NMR. Yet almost nothing (only a single BRK) was received. Another, weaker opening happened between 07:00 and 08:00 UTC and this time two perfect decodes were received from NMR.

There is a lot more traffic than a few years ago; e.g. lately Oostende is using the full time slot, leaving little room for DX!

NAVTEX 490 kHz log over 1000 km:

Hello,

I got this feedback from Mississippi Voyager for a few hours ago.

It is a nice experience to see that a hobby group like this actually can provide useful information for a big tanker like the Mississippi Voyager. so thanks again for helping out on this guys.

Regards
Geir, La6LU

Hi Geir,

Thanks so much for taking the time to look into this issue.

I was not aware of any of these major changes. It?s obvious to me that the technical support I received on the phone for our unit was not aware of this either, or else it would have been brought up.

I understand now why our Wx messages read Norfolk, VA. That?s fine as they still put out the correct forecast.

The Nav Warning status, seems to be the main issue here. We continue to get mainly messages for East Coast areas, yet we are on the west coast. The change in all these stations, or the consolidation process that started to take place in September would probably explain this.

I will Check on the status of the firmware, I have a feeling this could be the problem.

Just so you know we use JRC units, I believe they are NCR-333. I look forward to hearing about what else you learn, especially from your contacts in the U.S. I will certainly keep you abreast of what we learn.

I do consider this to be a significant issue as we and all of shipping rely heavily on these Nav warnings to prepare us for discrepancies of aids to navigation that we rely on for safe navigation.

We will keep in touch.

Merry XMAS!!

Thanks

Chad

Hello all,

I overlooked that I in fact got two answers from the Mississippi Voyager.
Here is the 2'nd one.

Regards
Geir, LA6LU

HI again Geir,

I did receive your previous 2 emails, I woke up this morning pleased to
see all the feedback.

This response from Dirk seems to reflect the exact issue we are having,
but let me be clear about the fact that we have been experiencing this
problem to the extreme since September. This is not a new or recent
problem, nor is it random, we have been pretty much been only receiving
east coast(area 4) messages though labeled as area 12.

So the question is: what is the cause of this? And how do we fix it?

I am also led to believe that other vessels must be experiencing this as
well, but yet I have not heard of any issues from my colleagues on other
vessels. Very interesting.

I look forward to sharing with you all we learn on this matter and
getting sorted out.

Thanks

Chad

Hello Chad,

Yesterday night (local) time. I sent you some feedback regarding your
ship's navtex problems. I hope you got that mail.

Below are one more feedback I got today regarding this and is gotten from Dirk Claessens which is the author/programmer of the navtex decoding software YanD.

Hello Geir,

I was finally able to download a manual for the JRC NCR-333. I don't think the software version would make a difference. Also, if it did all ships using this equipment would need the upgrade. The only thing I can think of is for them to go through the set up screens for each receiver (490/518/4209.5) they use. I think they said they did this but need to insure on the type messages screen that type "A" is selected.

They are concerned about type "A" messages (Nav warnings). The manual says this and a few other message types are automatically selected. I would think there could be a glitch and the type "A" message could be deselected.

Attached is a screen grab of that page from the instruction manual.

11935. NAVTEX from Les Alpes Maritimes 231215

Yahoo group: navtexdx (2015)
Date: 2015-12-23 07:29:45 UTC
From: Frans.Vink@...
Topic: 11935 Message: 11935

Short is the word.

Report from: Frans Vink Stations over 1500 km
QTH : 43 36 N 7 00 E
Receiver : PM-SDR
Antenna : PA0DRT miniwhip (6m)
Computer : Dell Optiplex 720 with SB XFi Surround 5.1 Pro

```

11937. Re: [navtexdx] Forward: NavTex messages (from CSC Mississippi Voyager) [1 Attachment]

Yahoo group: navtexdx (2015)
Date: 2015-12-23 11:42:27 UTC
From: la6lu@online.no
Topic: 11915 Message: 11937

Hello Don,

Thanks again. I just forwarded your post directly to Mississippi Voyager. Nice to see they have a JRC /navtex/ receiver since I am having a JRC NRD-545 /shortwave /receiver :)

I am soon off now to celebrate Cristmas at my eldest daughter and husband's farm in Notodden (just a few hundred meters from NTD-400). I'll be back here the 25'th afternoon, but bring with my my Android tablet so i can follow this thread if something else comes up.

I wish you, your family and ALL member of this group a very happy Christmas.

Regards
Geir, LA6LU

Hi Carlo,

Yes, USCG stations do not use the 10-minute time slot rule.
They can go on for 30 minutes or more.
This is a Good Thing for DXers, San Juan would be hard to catch, in
parallel with Saudanes, Penalva and La Maddalena!

Regards - Dirk

11942. Re: [navtexdx] NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-23 19:32:49 UTC
From: Dirk Claessens
Topic: 70 Message: 11942

Hi Roelof,

Thanks for your insights about the Puerto Rico beacon yesterday.
Propagation phenomena remain fascinating.
Regarding the Ostend "wide spectrum" issue, I can confirm I have just
whitnessed it in their 19:10 transmission.
I switched on the Perseus around 19:15 and saw a spectrum about 3..4
times as wide as normal.
But, by the time I could switch the Perseus into waterfall mode in order
to get some history, all returned back to normal, bad luck.
So it seems to be of intermittent nature.

Regards - Dirk

11943. Re: [navtexdx] Forward: NavTex messages (from CSC Mississippi Voyager)

Yahoo group: navtexdx (2015)
Date: 2015-12-23 19:55:41 UTC
From: Dirk Claessens
Topic: 11915 Message: 11943

Hi Geir,

First off: a happy Christmas to you and yours!

Below is another example of a misrouted message from 04R San Juan but
clearly destined for New Orleans, as logged this week by Franck Baste in
France.
The header is missing but it was transmitted in the 02:50 time slot
assigned to San Juan.
Broadcast at G is (or should be) a clear routing indicator, meaning 04G
NMG New Orleans,
CCGDEIGHT = Commander Coast Guard District 8, located in New Orleans,
Mentioned is Gulf of MX (Mexico)

Regards - Dirk

<02:58:53> BROADCAST AT G.
<02:58:56> CCGDEIGHT BNM 0162-15
<02:59:01> TX - GULF OF MX
<02:59:05> 1. ON DEC 17, 2015, AT 4:00 P.M., THE U.S
<02:59:15> COAST GUARD WILL CONDUCT A LIVE FIRE EXERCISE CENTERED IN
<02:59:26> APPROX PSN 28-51-42N 044-34-00W. THE AREA OF
<02:59:35> HAZARD IS SURFACE TO 10,000 FT WITH A DANGER RADIUS
<02:59:45> OF 10 NM. MARINERS ARE URGED TO REMAIN CLEAR OF
<02:59:55> THE AREA DURING THE EXERCISE P

From: Dirk Claessens
Topic: 11944 Message: 11944

Hi all,

Log over 1500 km.
Quseir in 2 time slots, not bad for 3755 km over a land path.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.4

11947. NAVTEX REU Logs

Yahoo group: navtexdx (2015)
Date: 2015-12-24 10:15:10 UTC
From: denno9@...
Topic: 11824 Message: 11947

Hello all, last night's full log. Fairly even coverage, but there seems to be a distinct hole in the Egypt direction.
CTQ is a welcome first though. A Happy and Peaceful Christmas to all!
Best wishes
Dryden F4VRG
Location: Neffies. Locator: JN13PM

11948. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-24 10:39:44 UTC
From: david
Topic: 9398 Message: 11948

Hello All,

A busy night, even after allowing for all my local transmitters warning about the storm-force winds that were already bending my antenna masts over to the horizontal. But there wasn't much DX. It was good to see Haifa after a long absence from my log, but I missed the Egyptians [again].

Logs over 1500km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)

11950. Navtex log from Antwerp, BEL 20151224

Yahoo group: navtexdx (2015)
Date: 2015-12-24 14:33:06 UTC
From: Dirk Claessens
Topic: 11950 Message: 11950

Hi all,

Bodo was received in 3 time slots, but no sign of Vardo.
Irakleio is sending unformatted messages again, a few examples are
included in the raw log.

Merry Christmas to all!

Regards - Dirk

Mery Xmas to one and All!

Hello Dirk,

On the other side of the coin it keeps Dxer's nearer to these off
schedule and wind bags from logging Dx!

"Yes, USCG stations do not use the 10-minute time slot rule.
They can go on for 30 minutes or more.
This is a Good Thing for DXers, San Juan would be hard to catch, in
parallel with Saudanes, Penalva and La Maddalena!

Regards - Dirk"

11957. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-12-25 11:08:21 UTC
From: david
Topic: 9398 Message: 11957

Hello All,

From around 0200 it was as though someone started up a noise source. Only locals made it through after that. The NDB band is still as bad in mid-morning. I've checked all the local suspects, including different antennas, but the noise is still there.
Perhaps tomorrow.. .. ..

Logs over 1500km

11958. SUZ/SERAPEUM RADIO on behalf of SUH/ALEXRADIO?

Yahoo group: navtexdx (2015)
Date: 2015-12-25 12:26:42 UTC
From: Mauricio Molano Sánchez
Topic: 11958 Message: 11958

Hi friends,
Is Serapeum Radio/SUZ broadcasting on behalf of Alexandria/SUH?...
Yesterday, on the N slot at 2210Z, I got the following pointing
to that:

```
<22:09:44> ZCZC XA29
<22:09:45> SERAPEUM RADIO
<22:09:48> 24 2210 UTC. DEC. 15

11959. Re: [navtexdx] SUZ/SERAPEUM RADIO on behalf of SUH/ALEXRADIO?

Yahoo group: navtexdx (2015)
Date: 2015-12-25 15:56:56 UTC
From: Dirk Claessens
Topic: 11958 Message: 11959

Hello Maurizio,
I catched almost exactly what you logged from AlexRadio, except for the initial Serapeum part,
very strange.
The part apparently from SUH: "ALEXRADIO F/C MED SEA---" in your log does make sense though:
a weather forecast from AlexRadio is indeed following.
Alexandria's header formatting has been wrong the last weeks: see ZCZCNE40, ZCZCNAJ48, ZCZCNAJ47

I don't know what to think about this...

Regards - Dirk

11960. Navtex log from Antwerp,BEL 20151225

Yahoo group: navtexdx (2015)
Date: 2015-12-25 16:16:11 UTC
From: Dirk Claessens
Topic: 11960 Message: 11960

Hello all,

Christmas log over 1500 km.
Vardo is back, but now not a trace of Bodo.

Regards - Dirk

11961. NAVTEX from les Alpes Maritimes FRA 251215

Yahoo group: navtexdx (2015)
Date: 2015-12-25 16:47:29 UTC
From: Frans.Vink@...
Topic: 11961 Message: 11961

Merry Christmas!

All three Egyptians present, even Alexandria with a correct header. No sign of Cyprus though.
Grindavik is really rare in my list. Not bad, not bad at all.

Report from: Frans Vink Stations over 1500 km

11962. Re: [navtexdx] SUZ/SERAPEUM RADIO on behalf of SUH/ALEXRADIO?

Yahoo group: navtexdx (2015)
Date: 2015-12-25 20:12:25 UTC
From: Roelof Bakker
Topic: 11958 Message: 11962

Hello Maurizio, Dirk,

I have been receiving this message for weeks now.
YaND treats is as Serapeum, as Serapeum is a unique key-word.

I have logged it as such!

73,
Roelof

11963. Navtex logs from Lodi - ITALY

Yahoo group: navtexdx (2015)

11965. Re: [navtexdx] SUZ/SERAPEUM RADIO on behalf of SUH/ALEXRADIO?

Yahoo group: navtexdx (2015)
Date: 2015-12-25 21:04:15 UTC
From: Dirk Claessens
Topic: 11958 Message: 11965

Hi Roelof,

You are absolutely right, on the 23th (one day earlier) I received a similar sequence of confusing headers.
I hadn't noticed the 9X header.
I wonder who/what is managing the Navtex headers in Egypt...

Regards - Dirk

11968. Kelibia, TUN issues

Yahoo group: navtexdx (2015)
Date: 2015-12-26 09:30:19 UTC
From: Roelof Bakker
Topic: 11968 Message: 11968

Hello all,

Last night I received several strings of messages from $03T,
Kelibia, TUN:

```
20151226 0310 518 $03T 3VL Kelibia,TUN 1736
20151226 0310 518 $03T 3VL Kelibia,TUN 1736
20151226 0311 518 $03T 3VL Kelibia,TUN 1736
20151226 0311 518 $03T 3VL Kelibia,TUN 1736
20151226 0312 518 $03T 3VL Kelibia,TUN 1736
20151226 0312 518 $03T 3VL Kelibia,TUN 1736
20151226 0313 518 $03T 3VL Kelibia,TUN 1736
20151226 0313 518 $03T 3VL Kelibia,TUN 1736
20151226 0314 518 $03T 3VL Kelibia,TUN 1736
```

As I understand it, these are not actually transmitted by Kelibia
from Tunesia, but from $03O, Malta Radio from Malta.

It has been the policy of REU/RNA/RWW to enter reports only, that
are transmitted by the stated station itself and not on behalf of it
by an other station in the same area.

It is most unfortunate that these transmissions don't contain
information that they are transmitted on behalf of but not from
Kelibia. However, from a professional NAVTEX user kind of view,
which is receiving only selected stations, it makes completely
sense.

When you use YaND (and why should you not!), may I suggest that you
uncheck Kelibia under <Options> <SELECTIVE LOGGINGS> as long as this
situation continuous.

This will save me a bit of work, when uploading logs in REU.
Thank you for your cooperation!

Best regards,
Roelof Bakker
REU/RNA/RWW NAVTEX editor

11972. YAND error in W10

Yahoo group: navtexdx (2015)
Date: 2015-12-26 21:45:27 UTC
From: david visser
Topic: 11972 Message: 11972

Dirk.

Since installing YAND on Windows 10 Yand is freezing after deleting the UNIDS or sorting the log (e.g >1000 km)

Is there an other YAND version ?? I Must use ?

The system log reads:

21:34:46 SYS: startup...

21:34:46 SYS: OS version: 6.2 build 9200, Windows Version > Windows 7

21:34:46 SYS: CPU's detected: 4

21:34:47 SYS: opening database...

21:34:47 DATABASE: Log table succesfully opened, 2307 records

21:34:47 DATABASE: Station table succesfully opened, 211 records

21:34:47 SYS: directory path= C:\DX\long wave\navtex\YaND\YaND.ini

21:34:48 MODEM: FCenter/Shift set to: 1376/170

21:34:48 AUDIO: using device "Stereo-mix (Realtek High Defini"

21:34:48 AUDIO: settings: PCM, 11025Hz, 16bit, 1024 samples/block

21:34:48 AUDIO: format supported, starting input.

21:34:48 AUDIO: WaveIn Open OK

21:34:48 NETW: Server listening on port 50123

21:35:19 DATABASE: starting delete operation...

Topic: 11972 Message: 11973

Hi,

This is to be expected when Yand was installed anywhere under ...\program files(86)\
As explained in the manual, this will cause all kinds of non-admin users read/write problems on OS versions Vista, W7 and higher.
Uninstalling and re-installing in C:\whatever will solve the problem.
The installer will give a chance to change the target directory.

Regards - Dirk

Dirk [mobile]

Dirk,

Strange.
Yand was not installed in Pg86 but somewhere else.

Will try it tomorrow and run the program as administrator.

But

From: david
Topic: 9398 Message: 11977

Hello All,

Still struggling. The base noise level has dropped to around S3, now. Completely gone with no antenna, but much the same level on any of the antennas. I've tried a battery power injector for the active whips, to no avail. Passive antennas were the same. Whatever it is, I am getting it by radiation.
A lot of the houses around me are only used as holiday homes. I'm hoping the noise source might be someone who has come for Christmas / Hogmanay. All the same, I'm preparing for battery-powered trips to the countryside ;(

Logs over 1500km

Session Report for David Atkins, GM8XBZ

11981. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-12-28 08:55:51 UTC
From: Roelof Bakker
Topic: 70 Message: 11981

Hello all,

The solar indices are back to normal, however propagation is not!
Last night was particular poor and not a snippet of T/A or the
Atlantiic Islands were found!

NAVTEX 490 kHz log over 1000 km:

11987. Navtex log from Antwerp,BEL 20151228

Yahoo group: navtexdx (2015)
Date: 2015-12-29 15:14:31 UTC
From: Dirk Claessens
Topic: 11984 Message: 11987

Hi all,

Poor conditions again, but exceptional reception of SUZ: 9 messages in a row.
Message formatting of Irakleion on 4 MHz is equally silly as on 518: missing spaces, no line feeds.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.122980°N 4.467576°E [JO21je]

Topic: 11989 Message: 11989

Hello All,

Signals have been badly affected here by a new source of man-made noise. The noise levels have been high enough to mask all but a few of the stations more than 1500km away. My hope is that it will be only temporary, as the onset of the noise coincided with the start of the holidays and there are a lot of temporary residents around us. Scotland continues to be a popular venue for New Year celebrations. I had intended to carry on trying to receive signals, looking for the drop in noise levels, but there is an additional factor that has forced a different decision.

There is a new storm heading our way. We are expecting winds of 'Violent Storm' category (Beaufort Scale 11 or more - 115km/h) which can be expected to cause structural damage. So I have taken the antennas down, and will leave them on the grass until the New Year.
Even laid on the grass, the miniwhip picks up Navtex stations out to 600km, so I can see what my local forecasts are offering.

I'll continue to follow the list, of course. Thank you for being such friendly and helpful company in the past months. I wish you all a safe transition into the New Year, and I hope you prosper in 2016.

Best Wishes

David, GM8XBZ

Hello David,

There is also a G2/G1 geomagnetic storm coming in tomorrow, so you
probably wont' loose much.

*Dec 30 Dec 31 *
00-03 UTC 3 5 (G1)
03-06 UTC 3 4
06-09 UTC 2 4
09-12 UTC 2 4
12-15 UTC 4 3
15-18 UTC 6 (G2) 3
18-21 UTC 5 (G1) 3
21-00 UTC 5 (G1) 4

Happy New year to you and all members in the group.

Regards
Geir, LA6LU

Hi David,

Good luck, we're in the same boat here (almost literally), and just
waiting to see if Storm
Frank gives us another battering like Eva did last weekend. This area
has never flooded
before, but many parts of the area are still with electricity after
the local sub-station
flooded. Thankfully my supply comes from a different one and hasn't
been affected so far.
I've just been up the back garden checking my aerials, and you can
see that the ground is
still saturated, so a direct hit will make things even worse as the
ground just can't
take any more water (it's doing wonders for my earth system though!).

I'm fortunate in living at the top of a hill, and haven't suffered
anything other than a
leaky roof, but the poor folks in the lower parts of the valley
weren't so lucky. Talk
about the calm before the storm, I think you're doing the right thing
in taking your
antennas down, I just hope that mine survive the night as well,
though the winds shouldn't
be quite as bad here as you will be having.

This Christmas will be memorable, but for all the wrong reasons.

Batten down the hatches and good luck, and we'll hopefully see you
again in January, and
without the new QRM.

Best wishes for 2016.

Alan.

Hello David,

The same happened here 3 years ago: unexplicable noise levels during the Chrismas/New Year period.
I investigated and found 2 sources at the neighbour's premises: they had installed 2 Christmas lighting systems,
one in their Christmas tree, and one in the front garden. Both were fed from a Chinese power supply of the switched variety.
And both proudly carried the EC approvement label...

Stay safe while sitting out the storm!

Regards, and a Happy New Year to you and yours,

Dirk

Hi Dirk & All,

The crafty Chinese have even created their own 'China Export'
mark, which purely by coincidence looks almost identical to
the European one. I'm sure they weren't really intending to
try flooding Europe with non-standard and poorly made (and
in some cases downright dangerous) items/rubbish, and I find
it ridiculous that OFCOM, the UK body which is supposed to
police this sort of thing, could do nothing but put out
messages in the media telling people who think that they
may be affected to download a free app they've created which
will tell them what they already know "This stuff is crap
and causes interference!".

What we really want is for them to stop this rubbish getting
into the country in the first place.

This website shows how to tell the difference between the
the 'China Export' CE mark, and the proper European one:

http://www.icomuk.co.uk/News_Article/3794/17103/

73 for now, Alan.

Hello David,

Rest assured: there is no DX at the moment.
Propagation is completely bonkers. Yesterday I logged 11 NDB's from Nunavut; today I could not find the weakest trace!

Even with the awesome signal recovery of Linrad, life is a struggle for NDB hunting!

Hello all,

There is a bit more local noise in the evening here, but it tapers off after local midnight.

What I notice is that, unlike when long range propagation is good, the locals don't suffer as much from fading as they used to do and thus are blocking the channel far more effectively!

Hello David,

Good luck with the stormy weather that is coming your way.
It was even on the Dutch National TV 8 o'clock news.

More than force 11 is really bad.
So far force 9 has been the worst this year here and only caused
major traffic jams, which is not really a problem!

Hi David

Brace yourself for this storm. The current average wind speed here in the southeast corner of Co. Down in Northern Ireland is 70 knots (130kph) with gusts up to 75 knots. Of the three roads out of this area two are now closed to sea flooding and the third one over the mountains is blocked with fallen trees in several places.

Hi All,

The Chilean Spanish language service on 490 kHz was due to start by the 1st of January 2016, and according to this latest Notice to Mariners they have done just that.

This means that there should no longer be shared english/spanish broadcasts on 518 kHz, just Spanish on 490 and English on 518 from now on.

Easter Island is still listed as inoperative at the moment though.

Details attached below:

Alan.

Hi Roelof,

The message on 4MHz was received with the S-identifier, but I have manually changed it to H, thinking that the S would give you troubles :0) I wasn't aware of it that REU can use a different identifier for each frequency for each station.

Regards - Dirk

Hello all,
Last night's logs didn't look much, at first glance seeing just all the usual suspects. I almost missed SUK Quseir, a first for me at this location.I think the loop helped perhaps by nulling out the big guns from the north, even so, strange propogation.
Best wishes Dryden F4VRG

From: Roelof Bakker
Topic: 11984 Message: 12005

Hello Dirk,

Excellent, problem solved.

On an other note, I have not seen T/A propagation so poor at this time of the year before. The only Canadian NDB with marginal copy today has been QY-263, Sydney, CAN NS!

The path to Puerto Rico stays also very poor.

The forecast talks about a major geomagnetic storm once more.
Maybe the end of January will bring better propagation!

73,
Roelof

Hi all,

Another very short log, no Egyptians today...
EISN is dipping below 50, let's hope it stays that low.
The previous dips in december coincided with T/A reception here.

Regards - Dirk
